

Blue Brute® Bearing Interchange Guide

The following guide is for **reference** only. QM Bearings manufactures all our steel housings to compare dimensionally with many other manufacturers in the market place. Each section is divided by manufacturer then by housing style and series. The following chart will show the most direct Blue Brute bearing to interchange, then optional replacement depending on style of locking to the shaft.

How it works:

Pillow Blocks

- First Column non-shaded areas, QM recommended Blue Brute most direct interchange, where the base to center height, bolt centers and over all length equal the competitors block.
- Second column would offer an optional method of locking the bearing to the shaft.
- Third column would offer an optional method of locking the bearing to the shaft.
- Shaded areas, offers a block that would equal base to center height, but would have a slight variance in over all length or bolt centers.
- When there is no part number in the box, there is no interchange with that bearing.

Flange Cartridge

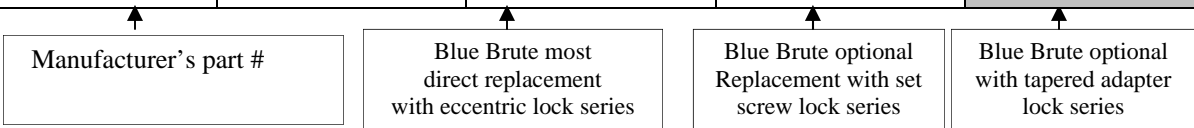

- First Column non-shaded areas, Blue Brute most direct interchange, where the bolt circle and over all length and pilot dimensions would equal competitors block.
- Second column would offer an optional method of locking the bearing to the shaft.
- Third column would offer an optional method of locking the bearing to the shaft.
- Shaded areas, offers a block that would equal bolt centers, but would have a slight variance in shaft extension.
- When there is no part number in the box, the bolt circle would be different and there is no interchange with that bearing.

Flange Block

- First Column non-shaded areas, Blue Brute most direct interchange, where the bolt center and over all width and shaft extension would equal competitors block.
- Second column would offer an optional method of locking the bearing to the shaft.
- Third column would offer an optional method of locking the bearing to the shaft.
- Shaded areas, offers a block would equal bolt pattern, but could have a different outside dimension.
- When there is no part number in the box, there is no interchange with that bearing.

Note:
 THE TYPE OF BEARING MAY DIFFER AS ALL QM BEARINGS ARE
 MADE FROM SPHERICAL ROLLER BEARINGS. ALL QM BEARING HOUSINGS
 ARE SOLID CONSTRUCTION.
