## NON-STANDARD SERIES CHAIN

DIAMOND
Chain Descriptions and Dimensions
Non-standard Series Chain
-800-US-CHAN

Prior to the ASME/ANSI standards, Diamond Chain produced many chains having unique dimensions, often for very specific applications. After industry's adoption of ASME/ANSI standards many of these chains became the current Standard or Heavy Series chains, but some did not. Diamond recognizes that a considerable amount of industrial equipment still utilizes these unique chains and so whenever possible we continue to produce them. The information below may be useful in identifying your "non-standard, but still very important" model.

$61 \times 3 / 16$ uses an alternating pitch of .6 and .4 inches. Consult Diamond for $65 \times 1 / 8$ standard attachment availability.

## Link Plate Height

Many times chains are contained within guides or extrusions to protect them from contamination. If this is the case, link plate height can be a critical dimension. The following charts represent nominal pin and roller link plate heights for the models shown. If more detailed information is required please contact Diamond's application engineers.
