Marathon® series corrosion-resistant mounted products and bearing units

Few industries challenge bearings with a harsher operating environment than the food and beverage industries. Perhaps no industry works as hard to meet regulations governing contamination. When MRC® introduced the Marathon® series composite mounted bearing units, it was possibly the best solution to the problems associated with bearing failures.

Since then, in addition to the composite units, our HD_I—heavy-duty cast iron—and XD_S—extreme-duty cast stainless steel—have been introduced to more thoroughly meet the needs of the industry.

The HD_I series combines corrosion resistance together with the strength of cast iron—without the problem of flaking nickel plating—and are priced competitively with nickel-plated versions. (See page 3 for details.)

For extremely challenging applications, the XD_S series provides top-of-the-line corrosion resistance and the greatest housing strength available within the Marathon line. (See page 4 for details.)

At the heart of the Marathon units are high-quality, corrosion-resistant insert bearings, available with MRC's ZMaRC® coating or with stainless steel construction. The units' multifunction rubber seals are bonded to AISI 304 stainless steel for superior corrosion resistance, and sealed-for-life lubricants are USDA approved.

A composite housing with integrated performance features

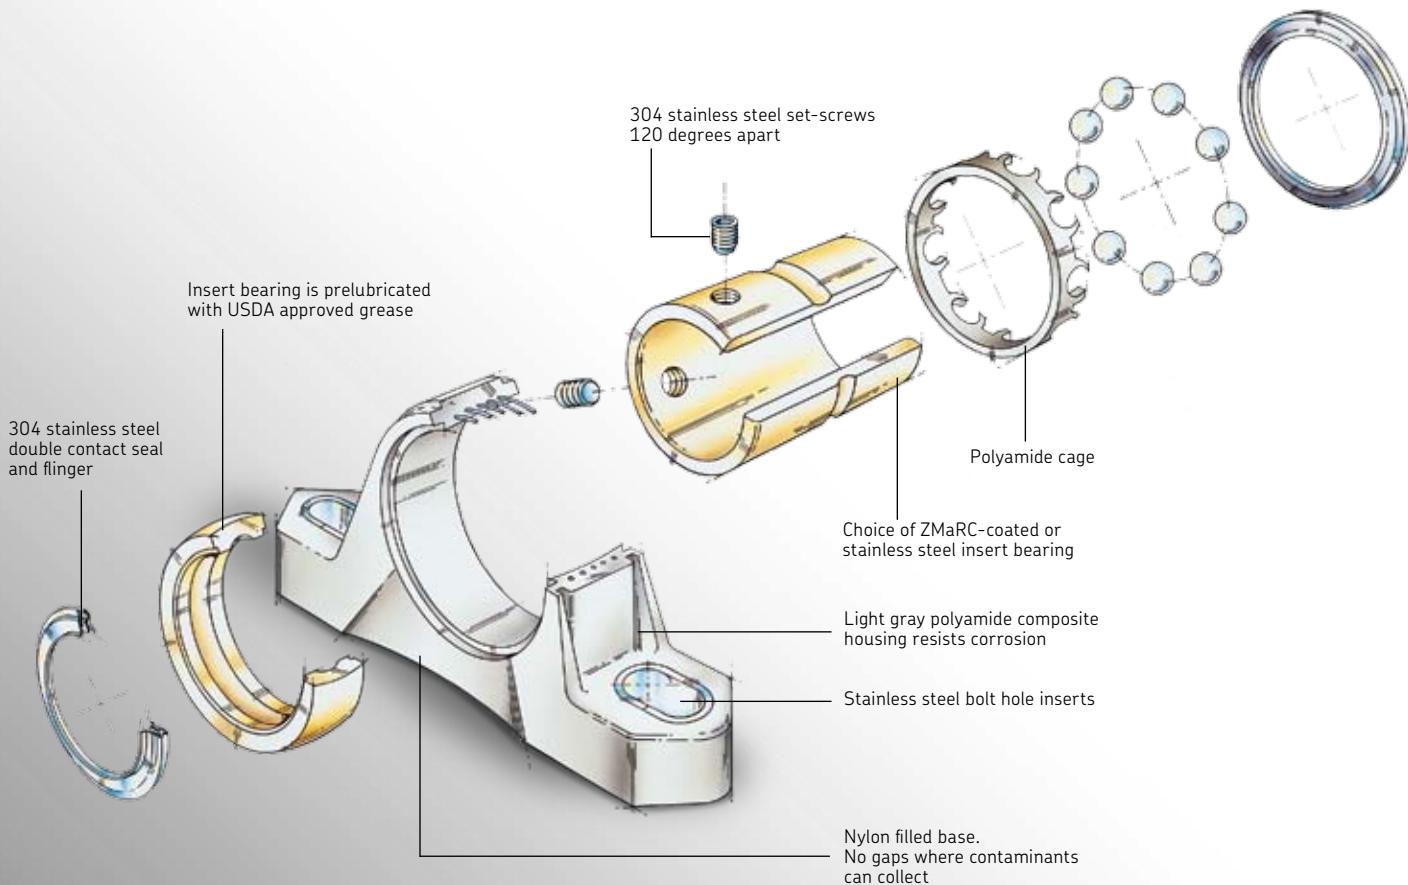

The Marathon series' composite housing resists citric acids, cooking fats and most chemicals used in food and beverage processing. It is constructed of a thermoplastic composite material that can be up to 61% lighter than cast iron housings. Its spherical bore accommodates the insert bearing's spherical outer surface, enabling the unit to fully compensate for initial bearing seating misalignment.

Plus, the housing is loaded with design and performance advantages:

- Steel coils embedded in the housing contribute to the housing's fracture strength. Radial breaking load is far greater than the static load rating of the bearing. Marathon series housings have possibly the highest fracture strength of any composite unit available.
- A nylon-filled housing base enables the unit to meet flush with its mounting surface. Flush surface-to-surface mounting eliminates gaps—potential areas for contaminants to collect.
- 300 series stainless steel bolt hole inserts provide added strength to each housing foot and prevent corrosion.

• Marathon series units are available in the following housing designs to meet the needs of most food and beverage processing applications:

- pillow block
- two- or four-bolt flange
- tapped base
- three-bolt bracket flange
- narrow and wide slot take-up
- low backing height pillow block
- low profile two- and three-bolt flange
- four-bolt piloted flange
- hanger

ZMaRC® coated cast iron units

The Marathon HD_i series is a corrosion-resistant, heavy-duty cast iron series of bearing units. The added strength and durability of the housings make them particularly well suited for applications in red meat, pork and poultry processing facilities where both housing strength and corrosion resistance are a concern.

The cast iron housings, protected with MRC's proven ZMaRC coating, eliminate the flaking problems associated with nickel-plated products, and are matched with our ZMaRC-plated, lubed-for-life, quality insert bearings.

The HD_i series provides a number of cost-saving and performance benefits. As with all Marathon products, MRC's patented two-part stainless steel seals allow the units to operate in heavy washdown environments without regreasing. And since there is no need for relubrication, continuous grease purge is never a problem.

Advantages of the HD_i series:

- Complete ZMaRC coating on all housing surfaces for long-term corrosion resistance.
- No relubrication, even in a washdown environment

- Open spaces on bases and backs of housings are filled with polyurethane, eliminating areas where moisture and product can collect, for a more sanitary housing design.
- Lubed-for-life with USDA approved H1 grease.
- Two-part sealing for maximum protection

Like all Marathon bearing units, Marathon HD_i units contain an AISI 304 stainless steel inner seal and outer seal. These components work in tandem to form an extremely effective sealing system.

(See page 5 for more details.)

The HD_i series is available in the following housing designs:

- pillow block
- two- or four-bolt flange
- tapped base

Marathon XD_S unit— MRC's top-of-the-line units

Extremely challenging applications require an extremely durable unit—the XD_S units. These housings are AISI 300 series cast stainless steel with MRC's proven stainless steel insert bearings.

The extra strength and toughness of the cast stainless housings are beneficial where loads are very heavy or where shock loads are possible. Also, the safety factor inherent in the cast steel housing is desirable in applications where housing failure could result in injury.

While composite and plated housings are resistant to most of the chemicals in use today, these stainless units are not affected by the strong concentrations of chlorine, hydrogen peroxide and other chemicals sometimes used in washdown procedures.

The XD_S cast stainless housings were designed especially for use in food and beverage applications. The bases have no recesses to trap debris and bacteria; the exposed surfaces of the housings have no unnecessary crevices or pockets; and the smooth finish minimizes material trapped on the surface allowing a more thorough cleaning.

Like the other members of the Marathon family, the XD_S series incorporates the proven insert bearing design and patented sealing arrangement (see page 5), and are also greased for life and maintenance free.

Housing styles available include:

- pillow block
- two- and four-bolt flange
- tapped base

MRC XD_S extreme duty machined stainless steel mounted units

MRC can also offer additional housing styles in machined stainless steel. Made of AISI 300 series stainless steel, these units are machined from solid stainless steel plate rather than cast. These are especially suited for applications where surface roughness is critical, such as instances where chronic bacterial problems have existed. As with the cast housings, there are no unnecessary recesses or cavities to trap debris.

And like the cast stainless units, MRC's excellent stainless steel insert bearings are used.

In addition to the housing styles available in the cast stainless steel line, these machined stainless steel units are also available in the following housing styles:
– three-bolt bracket flange
– wide and narrow slot take-up units
– compact two- and three-bolt flange
– piloted flange units

All machined housings are available through the MRC MTO (Made-To-Order) program.

XD_S extreme duty housings

Insert bearings

The Marathon units' high quality insert bearings are available with MRC's proprietary ZMaRC coating on the inner and outer rings. ZMaRC resists frequent washdowns with water and with acidic and caustic solutions far better than conventional insert bearings and conventional coatings, such as black oxide. That means greater protection against rust, greater protection against contaminant-related bearing failure and greater assurance that your equipment will pass USDA inspections.

If you prefer stainless steel, MRC will supply the Marathon series with AISI 420C stainless inner and outer rings and balls. The insert bearing's stainless steel set-screws, positioned 120 degrees apart, minimize inner ring distortion while maintaining good gripping strength.

ZMaRC-coated insert bearing

Stainless steel insert bearing

New! Marathon composite units with ZMaRC-coated bearing inserts are now also available from stock with eccentric locking collar mounting.

Eccentric locking collars provide a nearly 360-degree shaft contact for reduced slippage and improved mounting integrity. The eccentric locking collar mounting is primarily intended for use in applications where the direction of rotation is constant. This alternative to setscrew mounting also makes bearing removal easier by providing access to the setscrew dimple created on the shaft surface during the initial mounting procedure. The mechanic is then able to file down the raised edges around the dimple in order to easily slide the bearing off the shaft.

Other Marathon style units with ZMaRC inserts can be ordered with the eccentric locking collar through our Made-to-Order program.

ZMaRC-coated insert bearing with eccentric locking collar

Stainless steel sealing arrangement

A double-protection seal keeps the Marathon units running contaminant free. The sealing arrangement consists of a double-lip, AISI 304 stainless steel integral seal, an AISI 304 stainless steel flinger and a rubber-backed seal gasket. The flinger and seal's low-friction rubber lips, with optimized axial contact, form a double barrier against pollutants and washdowns. The seal gasket prevents contaminants from migrating around the seal insert's O.D., and the flinger adds mechanical and centrifugal protection against contaminant entry. The space between the insert seal and flinger is filled with USDA food-grade grease for even greater sealing efficiency.

USDA-approved grease

Marathon units are prelubricated-for-life with USDA H1-approved grease. The high quality synthetic grease is odorless and tasteless, and is approved for use in all food processing industries.

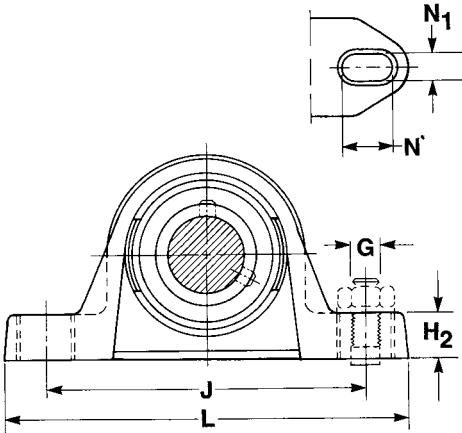

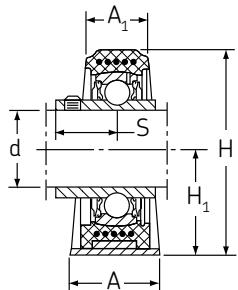

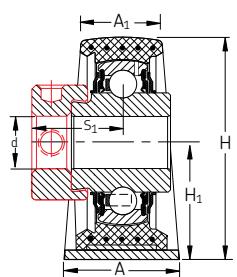

Other Marathon mounted bearing unit grease benefits:

- Excellent internal and external bearing corrosion protection.
- High aging resistance for extended lubricant life.
- High load carrying capacity, which helps prevent premature bearing wear.

CPB composite pillow block units

ZMaRC-coated insert bearing

Available with standard set-screw mounting or
eccentric locking collar mounting

MRC Marathon series composite mounted bearing units are greased and sealed for life. MRC does not recommend regreasing.

If required, units with relubrication fittings are available for your application. Adding a "G" suffix to the part number denotes a regreasable unit.

[†] Cast polymer housing. No steel coils.

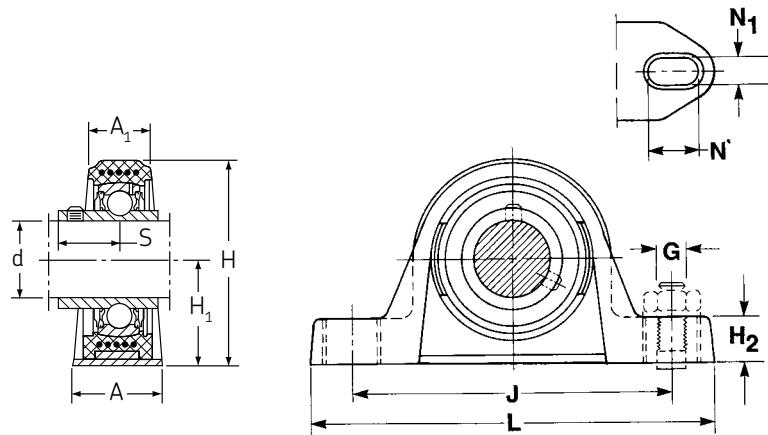

[‡] Check with MRC for availability.

[†] Capacities listed are for the insert bearing only and do not reflect the capacity of the housing. If the application loads exceed 80% of the static capacity (C_0), MRC Applications Engineering should be consulted for a design review.

MRC Marathon series composite mounted bearing units are greased and sealed for life. MRC does not recommend regreasing. If required, units with relubrication fittings are available for your application. Adding a "G" suffix to the part number denotes a regreasable unit.
Capacities listed are for the insert bearing only and do not reflect the capacity of the housing. If the application loads exceed 80% of the static capacity (C_0), MRC Applications Engineering should be consulted for a design review.

C2F composite two-bolt flange units

ZMaRC-coated insert bearing

Available with standard set-screw mounting or
eccentric locking collar mounting

For inch shafts $\frac{3}{4}$ – $1\frac{15}{16}$

MRC Marathon series composite mounted bearing units are greased and sealed for life. MRC does not recommend regreasing.

If required, units with relubrication fittings are available for your application. Adding a "G" suffix to the part number denotes a regreaseable unit.

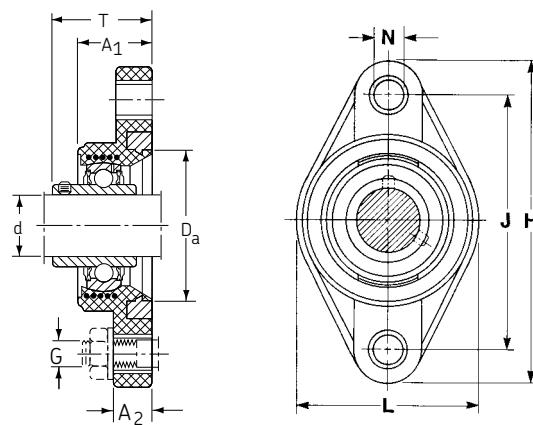

¹ Cast polymer housing, no steel coils.

² Check with MRC for availability.

^t Capacities listed are for the insert bearing only and do not reflect the capacity of the housing. If the application loads exceed 80% of the static capacity (C₀), MRC Applications Engineering should be consulted for a design review.

MRC Marathon series composite mounted bearing units are greased and sealed for life. MRC does not recommend regreasing. If required, units with relubrication fittings are available for your application. Adding a "G" suffix to the part number denotes a regreasable unit.

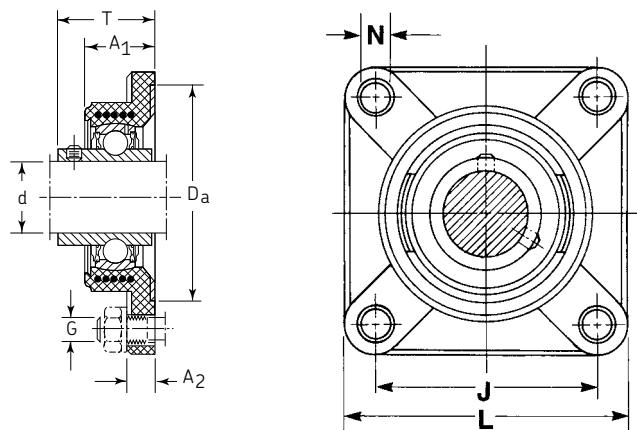

¹ Cast polymer housing, no steel coils.

² Check with MRC for availability.

[†] Capacities listed are for the insert bearing only and do not reflect the capacity of the housing. If the application loads exceed 80% of the static capacity (C₀), MRC Applications Engineering should be consulted for a design review.

MRC Marathon series composite mounted bearing units are greased and sealed for life. MRC does not recommend regreasing. If required, units with relubrication fittings are available for your application. Adding a "G" suffix to the part number denotes a regreaseable unit. Cast polymer housing. No steel coils.

[†] Capacities listed are for the insert bearing only and do not reflect the capacity of the housing. If the application loads exceed 80% of the static capacity (C₀), MRC Applications Engineering should be consulted for a design review.

MRC Marathon series composite mounted bearing units are greased and sealed for life. MRC does not recommend regreasing. If required, units with relubrication fittings are available for your application. Adding a "G" suffix to the part number denotes a regreasable unit. Cast polymer housing. No steel coils.

[†] Capacities listed are for the insert bearing only and do not reflect the capacity of the housing. If the application loads exceed 80% of the static capacity (C_0), MRC Applications Engineering should be consulted for a design review.

MRC Marathon series composite mounted bearing units are greased and sealed for life. MRC does not recommend regreasing. If required, units with relubrication fittings are available for your application. Adding a "G" suffix to the part number denotes a regreasable unit. Cast polymer housing. No steel coils.

² Check with MRC for availability

[†] Capacities listed are for the insert bearing only and do not reflect the capacity of the housing. If the application loads exceed 80% of the static capacity (C₀), MRC Applications Engineering should be consulted for a design review.

MRC take-up frames are constructed of 304 stainless steel and can be equipped with Marathon series composite mounted bearing units. They are designed for conveyor systems used in meat, poultry, fruit, vegetable, beverage and other food industry operations.

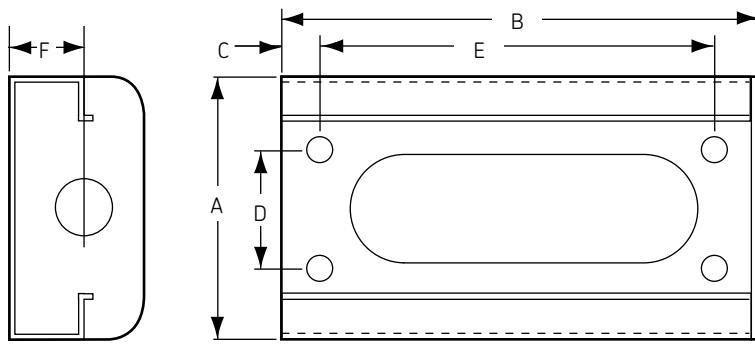

Normally employed at the idler end of conveyor systems, take-up frames support conveyor shafts and act to produce the correct conveyor belt tension. Unlike many take-up frames fabricated on site from

non-stainless materials, MRC stainless take-up frames feature sturdy single-piece construction and resist corrosion from frequent washdowns and harsh food industry chemicals.

MRC take-up frames mount securely to conveyor systems via four mounting bolts. The frames and take-up bearing units may be adapted to fit most existing conveyor configurations.

HACCP-program compatible

MRC stainless take-up frames help support the stringent sanitation requirements of Hazard Analysis Critical Control Point (HACCP) programs. In addition to being corrosion-resistant, the frames have no narrow gaps or crevices that can trap food contaminants. Also, openings in the side and bottom of MRC frames facilitate quick draining during washdowns.

Marathon series bearing units

Marathon series bearing units are available separately and may be mounted in MRC take-up frames. These units feature a lightweight thermoplastic housing that resists corrosion from water, citric acid, cleaning agents and most other food industry chemicals. The unit's double-protection sealing arrangement, consisting of an AISI 304 stainless steel insert seal and an AISI

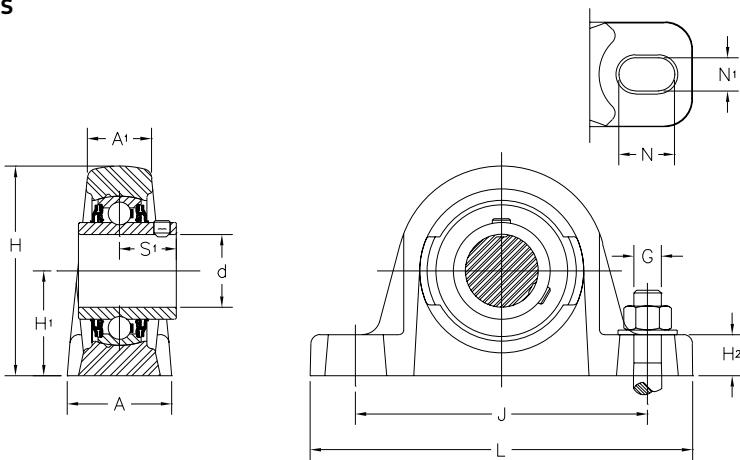

304 stainless steel flinger, protects against both wet and dry contaminants. The units are lubricated for life with a USDA food-grade grease.

Marathon units are available with either a corrosion-resistant ZMaRC-coated insert bearing or a stainless steel bearing.

Marathon submersible plane bearing units (Supplied through the MTO Program)

Set-screw locking

MRC submersible plane bearing units are suitable for applications, which are constantly exposed to or submerged in moisture. When normal anti-friction bearings fail because of grease washout or corrosion, MRC submersible plane bearings are the best choice to keep rotating equipment running smoothly. The 316 stainless steel inner sleeve offers wear resistance as well as corrosion resistance. The high performance polymer outer ring allows

the bearing to operate at moderate speeds without the need for lubrication since the polymer material is self-lubricated. Since the polymer material is the friction-reducing component, no grease is required for proper performance. And since frequent regreasing is the typical solution when trying to extend the service life of a bearing in severe operating environments, excessive grease purging is no longer a problem. The insert bearing will not catastrophically fail;

it wears and becomes loose in the bore, indicating it needs to be replaced. The polymer material can withstand continuous temperatures up to 150° F and tolerates higher temperatures during washdown. The recommended Marathon housing material for this insert is either the composite or cast stainless steel. In addition, the insert bearing is approved for direct food contact by the USDA / FDA in meat, poultry, and dairy applications.

For inch shafts $\frac{3}{4}$ – $1\frac{15}{16}$ (metric inserts can be supplied through the MTO program)

Insert bearing designation	Shaft dia d	D	B	C	S	Max speed*	Max load*	Radial load (fr) x speed (n)*	Mass

RRP1108BPL	$1\frac{1}{2}$ 38.1	3.1496 80.0	2.2323 56.7	1.2638 32.1	0.9685 24.6	120	1 900	6 100	1.0 0.45
RRP1115BPL	$1\frac{15}{16}$ 49.2	3.5433 90.0	2.2953 58.3	1.2638 32.1	1.0315 26.2	100	2 500	6 300	1.3 0.59

Plane bearing capacity is based on the heat generation, which is directly related to speed versus applied load. The "radial load x speed" column above provides the relationship between load versus speed in order to evaluate the bearing suitability. If the application conditions exceed any of the three factors above, different polymer materials can be selected to meet the application needs.

Marathon hi-temp plane bearing units (Supplied through the MTO Program)

Set-screw locking

MRC hi-temp units are fitted with high temperature plane bearing inserts that can withstand consistent temperatures up to 500° F. When normal anti-friction bearings cannot handle the heat, Marathon hi-temp units are a great solution to keep rotating equipment running smoothly. The 316 stainless steel inner ring and 304 stainless steel outer ring offer wear resistance as well as corrosion resistance. The high performance polymer sleeve material allows

the bearing to operate at higher speeds compared to typical plane bearings.

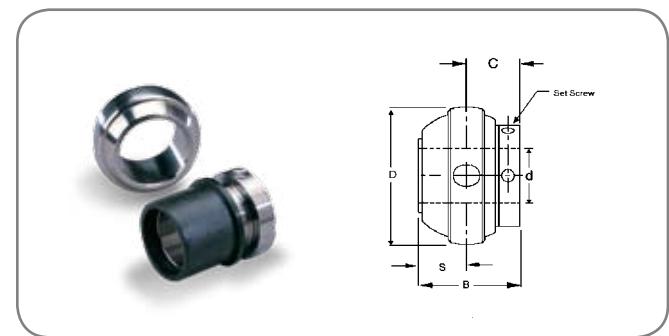

Since the polymer material is the friction-reducing component, no grease is required for proper performance. Therefore, they are maintenance free and there is no issue about excessive grease purging which is usually a problem when trying to extend the service life of a bearing in severe operating environments. In the event of premature wear, the insert bearing

will not catastrophically fail but will exhibit looseness indicating that the bearing needs to be replaced. The plane bearing inserts can be assembled into either the Marathon ZMaRC-coated cast iron or cast stainless steel housings to meet most application requirements for high temperature duty. In addition, the units meet USDA approval for direct contact in meat, poultry, and dairy applications.

If the application conditions exceed any of the three factors above, different polymer materials can be selected to meet the application needs.

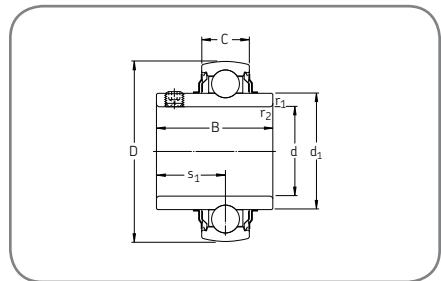

SKF hi-temp ball bearing units

(Supplied through the MTO Program)

Set-screw locking

SKF hi-temp ball bearing units are fitted with antifriction bearings that can withstand consistent temperatures up to 650° F. When normal anti-friction bearings seize, SKF hi-temp units are a great solution to keep rotating equipment running smoothly. Their increased radial internal clearance allows the bearing to expand without seizing at extreme temperatures. Manganese phosphated rings and black oxide flingers provide protection against corrosion. Their special graphite cage provides small quantities of graphite powder during rotation to adequately lubricate the rolling surfaces, making the unit maintenance free. And, since no lubrication is required, there is significant lubricant savings, there are no messy piles of grease that collect below the unit from continuous greasing, and there are not toxic fumes produced by the grease at the maximum operating temperature range.

Because of the special graphite cage and increased radial internal clearance, SKF hi-temp ball bearing units are designed to be operated up to approximately 100 rpm. In addition, the static load rating below is based on an operating temperature of 300° F. The rating gets reduced as the operating temperatures increase up to 650° F. The SKF hi-temp ball bearing units utilize the very effective MRC ZMaRC coating for the cast iron housings to provide corrosion protection. The units are available in four housing styles; pillow block, 2-bolt flange, 4-bolt flange, and tapped base. The insert bearings are shown below. The complete unit part number includes the basic housing style prefix, followed by the shaft diameter in inches, and finally the suffix "TF/VA228". Ex.: 1-1/2" pillow block for extreme operating temperatures would be SY 1.1/2 TF/VA228.

Made-To-Order products for the food processing industry

Low backing height pillow block (CPL-ZM or SS)

Size range:

$\frac{3}{4}$ – $1\frac{1}{2}$ inches, 20 mm – 40 mm

Insert bearing:

ZMaRC coated or stainless steel

These units have a lower backing height than standard pillow blocks while the base bolt center distance, bolt size, insert bearing and load ratings remain the same. The overall height and base thickness are slightly smaller. These units are non-re-greasable but can be furnished with grease fittings on special order. A regreasable unit is denoted by adding a "G" suffix to the unit part number.

Mounting and center height interchangeable with the following:

AMI	UCLP
Dodge	P2B-SC
Fafnir	YAK
Hub City	PB250
Link Belt	PL3
McGill	CL-25
Sealmaster	NPL

Low profile 2-bolt flange unit (C2L-ZM or SS)

Size range:

$\frac{3}{4}$ – $1\frac{7}{16}$ inches, 20 mm – 35 mm

Insert bearing:

ZMaRC coated or stainless steel

These units are smaller than a standard 2-bolt flange unit but have the same insert bearing and load ratings. They are used where space is limited. The housing bolt holes are round to accept round machine bolts. They are non-regreasable but can be furnished with grease fittings on special order. A regreasable unit is denoted by adding a "G" suffix to the unit part number.

Mounting interchangeable with the following:

Dodge	LFT-SC
Hub City	FB160
McGill	FBS2-25

Hanger units (SHU-SS)

Size range:

$\frac{3}{4}$ – $1\frac{1}{2}$ inches, 20 mm – 40 mm

Insert bearing: stainless steel

These units are used on screw conveyors and include a stainless steel housing tapped for a straight pipe thread. These units are non-regreasable but grease fittings can be furnished on special order. A regreasable unit is denoted by adding a "G" suffix to the unit part number.

Mounting interchangeable with the following:

AMI	UCECH, UCHPL
Dodge	SCHB
McGill	MCHB
Sealmaster	SCHB

3-bolt flange unit (C3F-ZM or SS)

Size range:

$\frac{3}{4}$ – $1\frac{7}{16}$ inches, 20 mm – 35 mm

Insert bearing:

ZMaRC coated or stainless steel

These units are non-regreasable and are applied where space constraints require a compact unit with sufficient strength for the application. The insert bearing and load ratings are the same as a standard unit with the same shaft diameter. The housing bolt holes are round to accept round machine bolts. A grease fitting can be furnished on special order. A regreasable unit is denoted by adding a "G" suffix to the unit part number.

Mounting interchangeable with the following:

AMI	BTM
Dodge	LF-SC
Hub City	FBI150
Sealmaster	LF

4-bolt piloted flange unit (CPF-ZM or SS)

Size range:

$\frac{3}{4}$ – $1\frac{1}{2}$ inches, 20 mm – 40 mm

Insert bearing:

ZMaRC coated or stainless steel

These are non-regreasable units which have an accurately machined piloting diameter to position the unit in the bore of the mounting surface, eliminating the need for any additional adjustments. The insert bearings and load ratings are the same as standard units with the same shaft diameter. A grease fitting can be furnished on special order. A regreasable unit is denoted by adding a "G" suffix to the unit part number.

Mounting interchangeable with the following:

AMI	UCFCS
Dodge	FC-SC
Hub City	FC350
McGill	PFC4-25
Sealmaster	SFC

Other shaft sizes may be available on special order.

Contact MRC at 1-800-MRC-7000 regarding pricing, availability or technical service for all Marathon series products, or for information on regreasable units.

Marathon series nomenclature

Shaft size

Inches:

First digit: Number of inches
Second and third digits: Number of sixteenths of an inch
Example: 103 indicates $1\frac{3}{16}$ (unit)

Metric:

First two digits: Number of millimeters
Example: 25 would indicate 25 millimeters

CPB 103 ZM

Housing

CPB - Gray composite pillow block
ZPB - ZMaRC-coated cast iron pillow block
SPB - Cast stainless steel pillow block
C2F - Gray composite 2-bolt flange
Z2F - ZMaRC-coated cast iron 2-bolt flange
S2F - Cast stainless steel 2-bolt flange
C4F - Gray composite 4-bolt flange
Z4F - ZMaRC-coated cast iron 4-bolt flange
S4F - Cast stainless steel 4-bolt flange
CTB - Gray composite tapped-base pillow block
ZTB - ZMaRC-coated cast iron tapped-base pillow block
STB - Cast stainless steel tapped-base pillow block
CBF - Gray composite 3-bolt bracket flange
CTN - Gray composite narrow-slot take-up
CTW - Gray composite wide-slot take-up

Insert bearing

L - Lock collar bearing unit
ZM - ZMaRC coated
SS - Stainless steel
G - Relubricatable bearing unit
ZMR - ZMaRC-coated insert bearing, with a $1\frac{1}{4}$ " bore, fitted into a housing that usually accommodates a $1\frac{3}{16}$ " insert bearing
SSR - Stainless steel insert bearing, with a $1\frac{1}{4}$ " bore, fitted into a housing that usually accommodates a $1\frac{3}{16}$ " insert bearing
HT - High temperature plane bearing
SB - Submersible plane bearing
HTR - High temperature insert bearing with a $1\frac{1}{4}$ " bore, fitted into a housing that usually accommodates a $1\frac{3}{16}$ " insert bearing
SBR - Submersible insert bearing with a $1\frac{1}{4}$ " bore, fitted into a housing that usually accommodates a $1\frac{3}{16}$ " insert bearing

Picker hub applications

Stainless steel bearings with solid lubricant pack (W64F)

Single row deep groove (SRDG), doubled sealed, stainless steel ball bearings are available with solid lubricant pack in a food-grade formulation identified as W64F. This lubricant is USDA approved for use in food related applications with incidental food contact. It has excellent oil lubricating properties and helps prevent grease washout and contamination under harsh operating conditions. This lubricant pack combined with stainless steel bearing components and synthetic rubber seals, provides a significant increase in bearing life in these applications.

Stainless steel single row, deep groove ball bearings packed with W64F solid lubricant are available from stock in five sizes, as shown in the table below. In addition to the suffix "ST" to denote stainless steel, a descriptive suffix "-W64F" is included to distinguish them from standard stainless steel bearings. Other sizes can be furnished on special order.

Technical data

Maximum operating temperatures

The temperature limits, measured on the bearing outside diameter are:

Maximum continuous: 180° F (82° C)
Maximum intermittent: 200° F (93° C)

Load ratings

Load ratings for bearings lubricated with W64F solid lubricant are the same as for standard bearings.

Speed limits

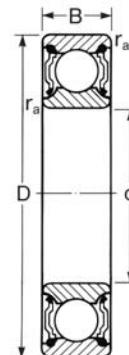

The speed limit Ndm, is dependent on the bearing bore and outside diameters, and RPM, in the following relationship:

$$N_{dm} = RPM \times \frac{(Bore + O.D.)}{2}$$

(bore, OD in mm)

For double sealed or shielded, single row, deep groove, stainless steel ball bearings, the limiting value of Ndm is 240,000.

It is important to note that as ambient or externally produced temperatures increase, the maximum operating speed may have to be reduced, to keep the bearing operating temperature within the maximum operating limit. As with most bearing lubricants, reducing bearing temperature adds to the capability of W64F.

For equivalent load and life calculations see page 52 and 53 in the MRC Engineering Handbook.

MRC bearing number	Bore		Outside diameter		Width		Fillet radius ¹⁾		Zd ²⁾		Basic radial load rating

											7 800	1 750
											15 300	3 440

¹⁾ Fillet radius indicates maximum fillet radius on shaft or in housing which bearing corner will clear.

²⁾ Rating for one million revolutions or 500 hours at 33 1/3 RPM.

Marathon series product range

Stainless steel single row deep groove (SRDG) ball bearings

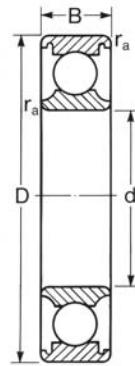

MRC stainless steel (SRDG) ball bearings are used in fish, poultry and other food processing applications. Examples of popular applications include automatic filleting and sizing equipment aboard fishing trawlers, and evisceration equipment in poultry plants.

MRC stainless steel SRDG ball bearings exhibit significantly longer life than standard

bearings in a wide range of demanding applications.

All MRC stainless steel SRDG ball bearings can also be specified with a solid lubricant pack that prevents grease washout during washdowns and helps protect against contamination in harsh environments.

For equivalent load and life calculations see page 52 and 53 in the MRC Engineering Handbook.

1) Fillet radius indicates maximum fillet radius on shaft or in housing which bearing corner will clear.

2) Rating for one million revolutions or 500 hours at 33 1/3 RPM.

3) Listed values are for a pressed stainless steel cage; ABEC.1. The speed ratings have been determined through historical application and practice.

Marathon series tolerances and dimensional data

Insert bearing bore tolerance and radial clearance

Bearing bore diameter		inch									mm					
		3/4	1	1 1/8	1 1/16	1 1/4	1 3/8	1 7/16	1 1/2	1 15/16	20	25	30	35	40	
Bore tolerance	in	+.0007	+.0007	+.0008	+.0008	+.0008	+.0008	+.0008	+.0008	+.0008	+.0007	+.0007	+.0008	+.0008	+.0008	
-0.0000	mm	.018	.018	.020	.020	.020	.020	.020	.020	.020	.018	.018	.020	.020	.020	
Radial clearance	in	.0005 - .0011		.0006 - .0013					.007-.0014	.0005 - .0011		.0006 - .0013				
	mm	.013 - .028		.015 - .033					.018-.036	.013 - .028		.015 - .033				

Shaft diameter tolerances

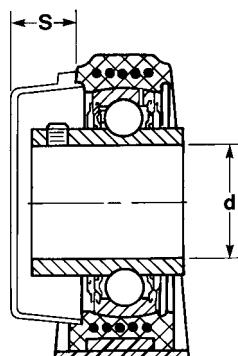

Shaft diameter in	Tolerance in
up to 1 15/16 2-4	+0.0000 / -.0005 +0.0000 / -.0010

For stainless steel insert bearings (RRH series), the above tolerances are especially critical because of the bearing material properties. Undersized shafting, excessive set-screw tightening, and severe environmental conditions can result in excessive ring distortion which can effect the performance of the bearing. Therefore, it is highly recommended that the proper set-screw torque and shaft diameter tolerance be used (see assembly instructions on pages 40 and 41).

End cover available on pillow blocks (CPB), 2-bolt flange units (C2F) and 4-bolt flange units (C4F).

End cover part number = EC prefix followed by shaft diameter.
Ex.: for a 1-1/8" shaft, EC1-1/8 is the end cover part number.

End covers only available on composite pillow block, 2-bolt and 4-bolt flange housings.

End cover stickout (S)

Shaft diameter d in	S in mm
3/4	20 0.709 20.5
	25 0.709 20.5
1	— 0.709 20.5
1 3/16	30 0.874 22.2
1 1/4	35 0.965 24.5
1 3/8	— 0.965 24.5
1 7/16	— 0.965 24.5
1 1/2	40 1.024 26.0

Assembly instructions for MRC Marathon bearing units

Step 1

Remove any burrs on the shaft with emery cloth or a fine file. Wipe the shaft with a clean piece of cloth. Check the shaft diameter to ensure it meets the tolerances shown below.

Shaft diameter tolerances

Shaft diameter in	Tolerance in
up to $1\frac{15}{16}$ 2-4	+0.0000 / -0.0005
	+0.0000 / -0.0010

Step 2

Back out all the set-screws of the double set-screw unit to clear the shaft and slide the unit into position on the shaft with the side opposite the shaft locking device leading.

Step 3

Make sure the housing base and mating surfaces are clean and free of any debris or burrs. Ensure that the supporting surface is flat. If the housing requires shims for adjustment, the shims MUST extend the full length and width of the base. Bolt the housing securely to the support. (see Table A for maximum recommended tightening torques for composite housings.) Note: For composite pillow block and flanged housings, a thick flat stainless steel washer should always be installed between the bolt head and mounting base to properly distribute the clamping force.

Step 4

ZMaRC double set-screw inserts

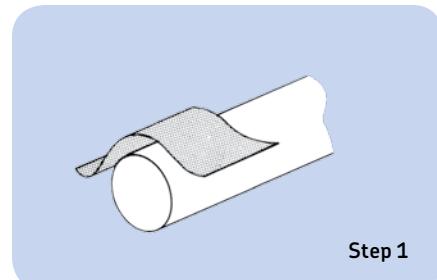

Before the set-screws are tightened, reinspect the position to make sure the housing did not shift when the base bolts were tightened. Tighten each set-screw alternately with the proper hex head socket wrench until they stop turning and the hex head socket wrench starts to spring. Reference Table B for maximum recommended set-screw tightening torque values and wrench dimensions. These values should not be exceeded.

ZMaRC lock collar Inserts

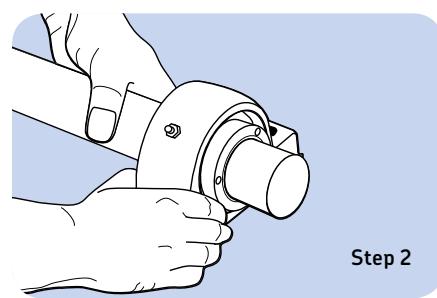

Push the eccentric locking collar in position on the inner ring extension and tighten with a quick jerk in the main direction of rotation of the shaft and then tighten fully using a spanner wrench or hammer and drift. Tighten the set-screw with the proper hex head socket wrench until they stop turning and the hex head socket wrench starts to spring. Reference Table C for maximum recommended set-screw tightening torque values and wrench dimensions. These values should not be exceeded.

Stainless steel inserts

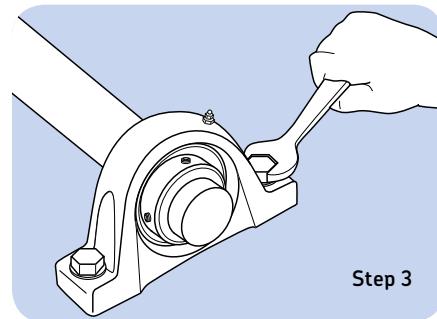

Before the set-screws are tightened, reinspect the position to make sure the housing did not shift when the base bolts were tightened. Remove the set-screws and apply a bonding agent to the set-screw's threads such as LocTite® and insert the set-screws back into the inner ring. Tighten each set-screw alternately with the proper hex head socket wrench until they stop turning and the hex head socket wrench starts to spring. Reference Table D for maximum recommended set-screw tightening torque values and wrench dimensions. These values should not be exceeded.

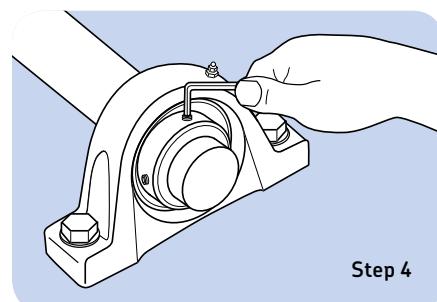

Step 1

25 mm	M6 x 0.75mm x 5mm	3 mm	35
30 mm	M6 x 0.75mm x 5mm	3 mm	35
35 mm	M6 x 0.75mm x 7mm	3 mm	35
40 mm	M8 x 1mm x 7mm	4 mm	80

Mounting the insert bearing into the housing

Position the bearing 90° from its normal position and insert it into the slots in the housing, making sure that the set-screws do not interfere with the edge of the housing bore. Then swivel the bearing into position using a piece of tubing through the bore. If the housing has a relubrication fitting, the set-screw side of the bearing should be matched to the side of the housing with the insert slots. In order to ensure that the relubrication fitting and lubrication holes line up, the initial misalignment should not exceed 5 degrees.

Marathon mounted unit basic comparison - metric shafts

Tapped-base pillow blocks

	Shaft diameter	20mm	25mm	30mm	35mm	40mm
	Housing	Insert bearing				
MRC	Composite	ZMaRC	CTB20ZM	CTB25ZM	CTB30ZM	CTB35ZM
	Composite	Stainless steel	CTB20SS	CTB25SS	CTB30SS	CTB35SS
	ZMaRC-coated cast iron	ZMaRC	ZTB20ZM	ZTB25ZM	ZTB30ZM	ZTB35ZM
	Cast stainless steel	Stainless steel	STB20SS	STB25SS	STB30SS	STB35SS
AMI	Polymer	Black oxide	UCTBL-204MZ	UCTBL-205MZ	UCTBL-206MZ	UCTBL-207MZ
	Polymer	Stainless steel	MUCTBL-204	MUCTBL-205	MUCTBL-206	MUCTBL-207
Fafnir	Cast iron	52100 steel	STB20	STB25	STB30	STB35
McGill	Cast iron	52100 steel	TBC-25-20	TBC-25-25	TBC-25-30	TBC-25-35
Sealmaster	Cast iron	52100 steel	TB-204	TB-205	TB-206	TB-207
						TB-208

Three-bolt bracket flange units

	Shaft diameter	20mm	25mm	30mm	35mm	40mm
	Housing	Insert bearing				
MRC	Composite	ZMaRC	CBF20ZM	CBF25ZM	CBF30ZM	CBF35ZM
	Composite	Stainless steel	CBF20SS	CBF25SS	CBF30SS	CBF35SS
AMI	Cast iron	52100 steel	UCFK-204	UCFK-205	UCFK-206	UCFK-207
McGill	Nickel plated	Black oxide	NMFB-20	NMFB-25	NMFB-30	NMFB-35
Sealmaster	Cast iron	52100 steel	FB-204	FB-205	FB-206	FB-207
						FB-208

Narrow-slot take-up units

	Shaft diameter	20mm	25mm	30mm	35mm	40mm
	Housing	Insert bearing				
MRC	Composite	ZMaRC	CTN20ZM	CTN25ZM	CTN30ZM	CTN35ZM
	Composite	Stainless steel	CTN20SS	CTN25SS	CTN30SS	CTN35SS
Dodge	Nickel plated	52100 steel	NSTUSC20MNP	NSTUSC25MNP	NSTUSC30MNP	NSTUSC35MNP
	Cast iron	52100 steel	NSTUSC20M	NSTUSC25M	NSTUSC30M	NSTUSC35M
						NSTUSC40MNP
						NSTUSC40M

Wide-slot take-up units

	Shaft diameter	20mm	25mm	30mm	35mm	40mm
	Housing	Insert bearing				
MRC	Composite	ZMaRC	CTW20ZM	CTW25ZM	CTW30ZM	CTW35ZM
	Composite	Stainless steel	CTW20SS	CTW25SS	CTW30SS	CTW35SS
AMI	Polymer	Black oxide	UCTPL-204MZ	UCTPL-205MZ	UCTPL-206MZ	UCTPL-207MZ
	Polymer	Stainless steel	MUCTPL-204	MUCTPL-205	MUCTPL-206	MUCTPL-207
Dodge	Cast iron	52100 steel	WSTU-SC-20M	WSTU-SC-25M	WSTU-SC-30M	WSTU-SC-35M
Sealmaster	Polymer	Black oxide	ST-204	ST-205	ST-206	ST-207
SKF	Cast iron	52100 steel	TU20TR	TU25TR	TU30TR	TU35TR
						TU40TR
