THE BASIC TYPES OF

HOW TO USE THIS CATALOG

The purpose of this catalog is to provide dimensional and part number information required to identify NDH Hy-Roll Bearings quickly and accurately.

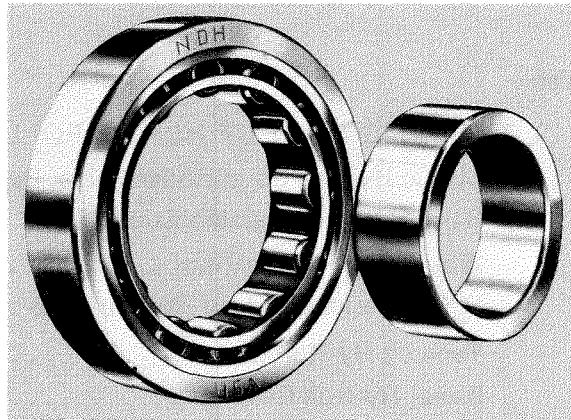

Usually it is possible to identify a bearing by reference to appropriate service manuals which list the bearing make and part number against its location in a particular application. The numbers stamped on the bearing component parts also help in verifying the bearing part number. Occasionally, however, the part number stamping is mutilated in service, or records on the exact application are not available. Then the problem becomes one of determining the correct part number from the dimensions and the physical appearance of the parts on hand. This catalog supplies the necessary information to enable you to do so.

Familiarity with the material in this catalog and its presentation will be helpful in developing speed and accuracy of identification. The following procedure is suggested:

Identify the type of bearing, i.e., whether it is a Metric Hy-Roll, Barrel Hy-Roll, Tapered Hy-Roll, Wound Hy-Roll or Solid Trunnioned-end Roller type.

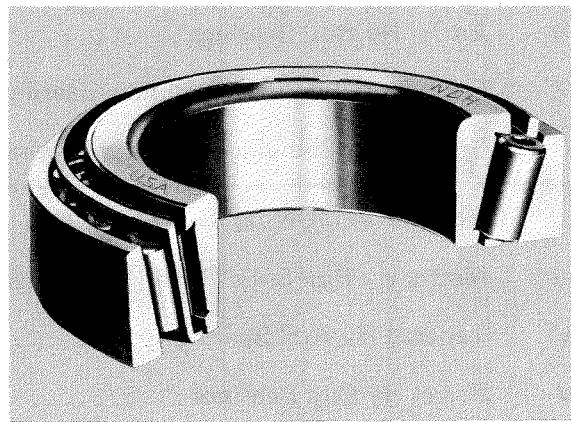

Refer to appropriate tables and determine the part number according to instructions given with each table.

Individual component parts, such as roller assemblies and separable inner and outer rings can be identified by dimensions and descriptions given in the appropriate tables.

"Metric Hy-Roll" Bearings—Table I, Page 6

Bearings in this group are distinguished by the short cylindrical solid rollers with flat ends, and cylindrical rings. The rings may be plain or have a rib. This rib may be at one end only, or at both ends.

"Tapered" Hy-Roll Bearings—Table IV, Page 53

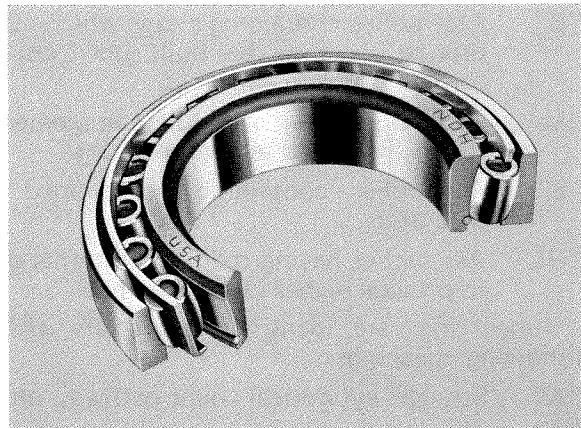

Tapered Hy-Roll bearings are exactly what their name signifies. The rollers are conical or tapered. The ring operating surfaces are tapered also, and the inner rings are always made with a flange or shoulder at the thick end. The rollers are usually held with the inner ring, the outer ring being separable. Roller and inner ring assemblies are commonly called "cones", the outer rings, "cups". The Double Row type is usually made up of two cones and a double tapered cup.

NDH HY-ROLL BEARINGS

"Barrel" Hy-Roll Bearings—

Table V, Page 57

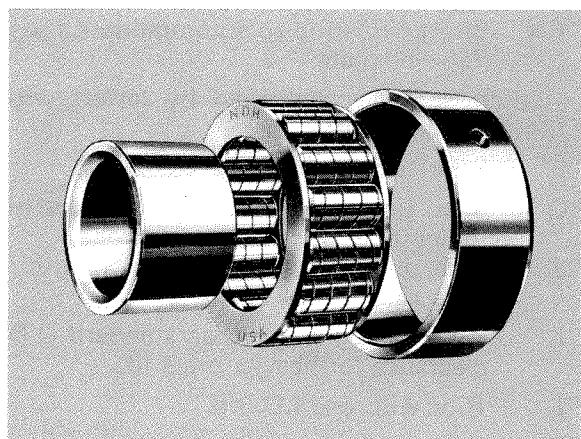

Barrel Hy-Roll bearings are easily identified by their symmetrical barrel shaped rollers and curved pathways. Rings of the single row types are separable, the rollers being held with one ring by the separator and a snap ring. The only exceptions to this are the steering gear bearings in which the roller assembly is a separate unit because there is no inner ring. Double row types are non-separable.

"Wound" Hy-Roll Bearings—

Table II, Page 32

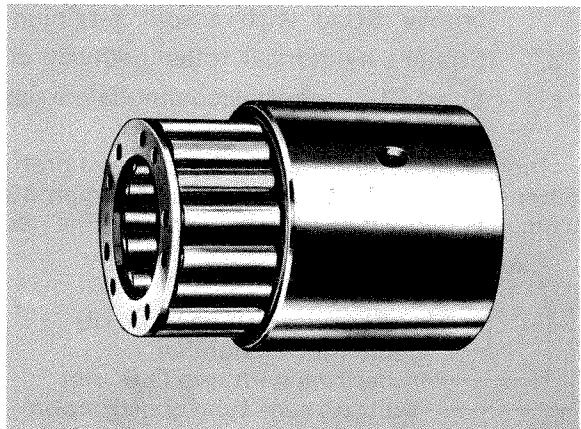

The distinguishing feature of this type of bearing is the wound (sometimes called "helical" or "spiral") cylindrical roller. Wound roller assemblies are always made as separate units and used alone or with either an inner or outer ring or with both. Outer rings may be either the "solid" or thick wall cylinder type or thin wall "split" type. Inner rings are always relatively thick wall cylinders, plain or notched at one end.

"90000 Series" Solid Hy-Roll Bearings—

Table III, Page 42

Bearings in this group are made up with trunnioned-end solid cylindrical rollers assembled in cages composed of spacing bars riveted to end rings. The roller assemblies thus formed may be used alone or with outer rings in the same manner as the wound roller types. In fact, a considerable number of these assemblies are interchangeable with wound roller equivalents, as shown in Table IX.

Page 4

NDH METRIC HY-ROLL SOLID

NDH Metric Hy-Roll bearings are classified according to construction and identified by letters with the following meanings:

- "B" Assemblies containing a cage which may be bronze, or may be built up from steel formed bars and end rings.
- "M" Assemblies having a full complement of rollers, hence no separator or cage.
- "S" Assemblies containing a stamped steel separator.
- "HC" Assemblies having modified internal design to provide higher load capacity.

Inner rings are identified by letters with the following meanings:

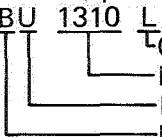

- "A" Straight cylindrical roller pathway on O.D.
- "J" Side plate used in conjunction with "RN" type ring.
- "R" Ring with one O.D. rib.
- "U" Ring with two O.D. ribs.
- "RN" Short "R" ring to accommodate a separate "J" side plate.

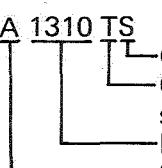

Outer rings are identified by letters with the following meanings:

- "F" Blind dowel hole.
- "G" Snap ring groove in O.D. (4 in place of "G" indicates O.D. snap ring included).
- "J" Side plate used in conjunction with "LN" type ring.
- "K" Ring having larger than standard O.D. and clearance for heavier press fit.
- "L" Ring with one I.D. rib.
- "T" Ring with two internal grooves fitted with split retaining rings.
- "W" Ring with two I.D. ribs.
- "Y" Ring with one I.D. rib and one internal groove fitted with a split retaining ring.
- "Z" Straight cylindrical roller pathway on I.D.
- "LN" Short "L" ring to accommodate a separate "J" side plate.

Inner ring symbols are only used as a prefix and outer ring symbols as a suffix to a four digit number which is explained further on in this section.

Examples:

BU 1310 L

 Outer ring with one I.D. rib
 Basic bearing number
 Inner ring with two O.D. ribs
 Built up cage type construction

A 1310 TS

 Construction with pressed steel separator
 Outer ring with two internal grooves & split retaining rings
 Basic bearing number
 Straight cylindrical inner ring

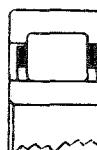

SEPARABLE INNER RING TYPE

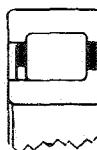

A-TS Single row, straight inner ring, rollers retained by separator and retainment rings recessed in outer ring, inner ring separable.

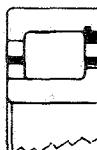

R-TS Single row, single rib inner ring, rollers retained by separator and retainment rings recessed in outer ring, inner ring separable.

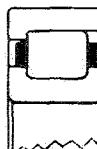

A-WB Single row, straight inner ring, built up cage, double ribbed outer ring, inner ring separable.

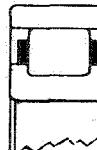

R-WB Single row, double ribbed outer ring, built up cage, single rib inner ring, inner ring separable.

R-YS Single row, single ribbed inner and outer rings, rollers retained by separator, flange and single retainment ring recessed in outer ring, inner ring separable.

BU-L Single row, double ribbed inner ring, single rib outer ring, built up cage, outer ring separable.

BU-Z Single row, double ribbed inner ring, straight outer ring, built up cage, outer ring separable.

NON-SEPARABLE TYPES

U-TS Single row, double ribbed inner ring, rollers retained by separator and retainment rings recessed in outer ring, non-separable.

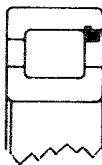

ROLLER RADIAL BEARINGS

U-TM Single row, double ribbed inner ring, rollers retained by retainment rings recessed in outer ring, non-separable, full complement of rollers.

U-YS Single row, double ribbed inner ring, single rib outer ring, rollers retained by separator, rib and single retainment ring recessed in outer ring, non-separable.

U-YM Single row, double ribbed inner ring, single rib outer ring, rollers retained by rib and single retainment ring recessed in outer ring, non-separable, full complement of rollers.

Basic bearing sizes are indicated by the bearing number. The number contains four digits,* the first two of which designate the bearing series and the last two the bore diameter. The first digit indicates the relative width of the bearing, "1" denoting narrow, "5" wide, "6" duplex (a double wide assembly**), and "7" intermediate width. The second digit indicates the bearing annulus (i.e., its cross section) with "9" denoting the smallest and increasing through "0", "2", and "3", which has the largest O.D. for a given bore. The last two digits signify the bore size in the following manner:

| *Special numbering of "LOADSTAR" line adds a fifth digit - a prefix "6". | Digits | Diameter |
|--|--------|----------------|
| | 00 | 10 millimeters |
| | 01 | 12 millimeters |
| | 02 | 15 millimeters |
| | 03 | 17 millimeters |

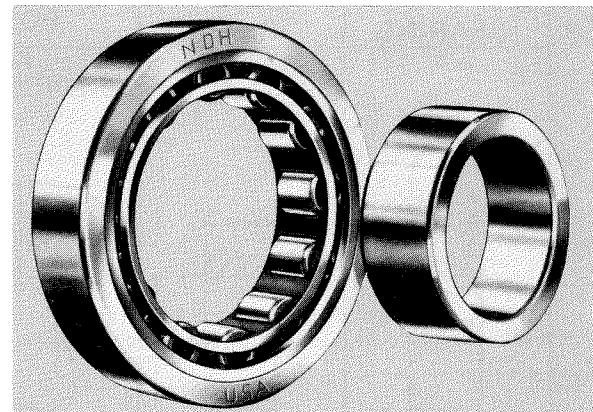

**having two rows of rollers

Beyond this, the bore diameter in millimeters is determined by multiplying the last two digits times five, as $04 \times 5 = 20$ mm, etc.

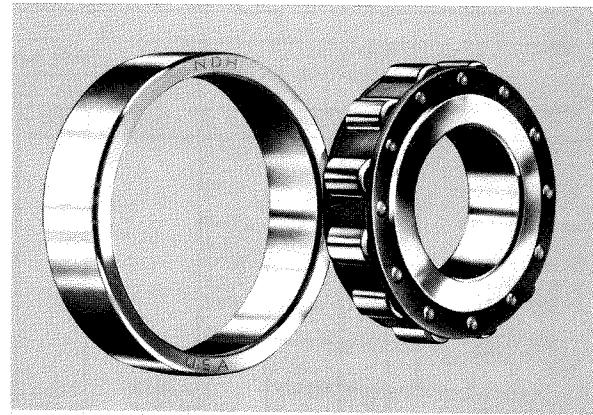

Additional symbols appearing in the prefix or suffix indicate a special bearing not conforming to standard form or dimension.

If you have a bearing to identify, and the inner or outer ring piece numbers can be read, determine whether the inner ring is separable, or the outer ring is separable, or if the bearing is non-separable. Then by referring to the illustration to the left and observing the rib, retaining ring, and separator arrangement you can select the proper symbols to complete the bearing piece number.

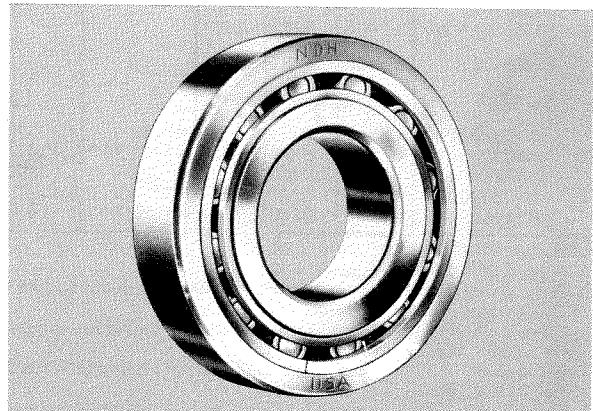

If the piece numbers on the inner or outer rings are mutilated or unreadable it will be necessary to measure the bearing and look up the dimensions in the appropriate columns in Table I to establish the piece numbers of the component parts. Then by referring to the parts and the illustration to the left you can complete the bearing piece number.

Separable inner ring type of bearing

Separable outer ring type of bearing

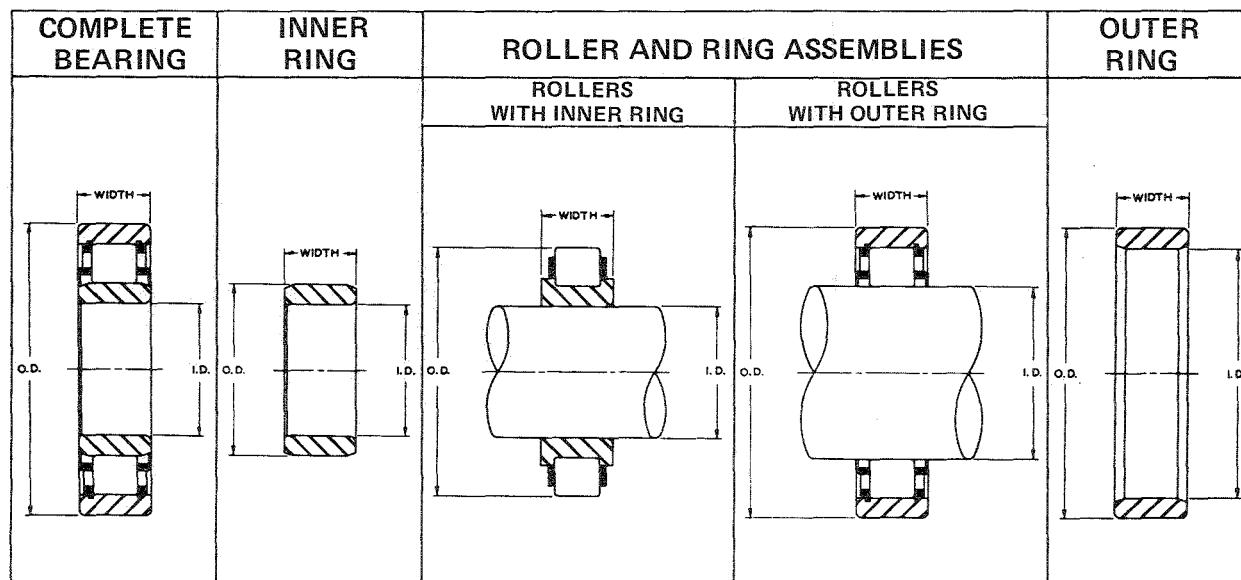

Non-Separable type of bearing

*Rollers assembled with outer ring.

**Rollers assembled with inner ring.

12—Same as BU1026L-V except internal clearance .0068 - .0085 and $\frac{1}{16}$ blind hole in O.D.

13—Same as BU1030L-V except internal clearance .0061 - .0079 and $\frac{1}{16}$ blind hole in O.D.

14—Same as BU1030Z-V except std. $\frac{1}{16}$ blind hole in O.D.

15—Same as BU1036Z-V except O.D., outer ring width, internal clearance .0114 - .0133 and $\frac{1}{16}$ blind hole in O.D.

16—Same as BU1036L-V except outer ring width.

17—Same as BU1036L-V except outer ring width and side plate 1036J-V added.

18—Same as A1038WB except internal clearance .0079 - .0102

19—Same as 1203TS except separator nicarbed.

20—Same as A1203TS except inner ring width, internal clearance .0027 - .0035, and separator nicarbed.

21—Same as 1204TS except roller diameter variation per assembly, outer ring runout, and wall variation reduced.

22—Same as U1205TM except outer ring width.

23—Same as U1205TM except outer ring width and O.D.

24—Same as U1205TS except outer ring width extended to one side of bearing, I.D. and internal clearance .0017 - .0026

25—Same as 1206TS except outer ring width.

26—Same as 1206TS except longer rollers.

27—With O.D. snap ring.

28—Same as U1206YM except internal clearance .0012 - .0021.

*Rollers assembled with outer ring.

**Rollers assembled with inner ring.

- 29—Same as U1206TM except I.D. and ring widths.
- 30—Same as A1206TS except inner ring bore, width and two $\frac{3}{8}$ radial holes thru inner ring.
- 31—Same as A1206TS except inner ring bore, width and two face notches.
- 32—Same as U1206YM except ring widths.
- 33—Same as 1207TS except outer ring width with two O.D. snap ring grooves.
- 34—Same as A1207TS except standard O.D. snap ring groove.
- 35—Same as A1207WB except O.D. and internal clearance .0027 - .0038.
- 36—Same as A1207TS except O.D.
- 37—Same as R1207WB except O.D. and internal clearance .0027 - .0038.
- 38—Same as U1207TM except inner ring corner radius .156.
- 39—Same as U1206TS except roller end clearance inspection.

40—Same as BU1207L except O.D. and internal clearance .0027 - .0038.

41—Same as A1207TS except I.D. and inner ring width, with two notches.

42—Same as 1208TS except O.D. and I.D.

43—Same as BU1208L except O.D. and internal clearance .0028 - .0039

44—Same as BU1208Z except O.D. internal clearance .0028 - .0039 and standard $\frac{3}{32}$ blind hole in O.D.

45—Same as A1208TS except I.D. and inner ring width, with two notches.

46—Same as 1209TS except roller diameter variation per assembly and outer ring wall variation reduced.

47—Same as A1209TS except standard O.D. snap ring groove.

48—Same as BU1209Z except internal clearance .0028 - .0042.

49—Same as 1210TS except width and two O.D. snap ring grooves.

• Roller assembly only in disposable sleeve.

*Rollers assembled with outer ring.

**Rollers assembled with inner ring.

50—Same as U1210TS except standard O.D. snap ring groove.

51—Same as A1210TS except I.D.

52—Obsolete—superseded by BU1210L-HC.

53—Same as BU1210L-HC except O.D., internal clearance .0033 - .0047 and std. $\frac{3}{32}$ blind hole in O.D.

54—Same as A1210TS except inner ring width, I.D., two I.R. face notches, and internal clearance .0016 - .0030.

55—Same as TXA1210TS except I.D.

56—Same as 1211WB-HC except standard O.D. snap ring groove.

57—Same as A1211TGS except standard O.D. snap ring groove.

58—Same as R1211TS except internal clearance .0014 - .0020 —matched bearing.

59—Same as U1211TS except with O.D. snap ring reversed location.

60—Same as U1211YS except with O.D. snap ring, reversed location.

61—Same as BU1211Z except internal clearance .0041 - .0055 and $\frac{3}{16}$ blind hole in O.D.

62—Same as A1211TS except I.D., inner ring width, I.R. has two face notches.

63—Same as A1212TS except internal clearance .0041 - .0057 and $\frac{3}{32}$ blind hole in O.D.

64—Same as A1212TS except standard O.D. snap ring groove.

65—Same as U1212TS except with O.D. snap ring.

66—Same as A1212TS except inner ring width, internal clearance .0041 - .0057 and $\frac{3}{32}$ blind hole in O.D.

67—Same as BU1212L except O.D. and internal clearance .0040 - .0056.

68—Same as BU1212LK except special roller crown.

69—Same as BU1212L except O.D., internal clearance .0040 - .0056 and standard $\frac{5}{16}$ blind hole in O.D.

70—Same as BU1212L except outer ring width, O.D., internal clearance .0040 - .0056, and side plate 1212.

71—Same as BU1212Z except O.D. and internal clearance .0040 - .0056.

72—Same as 1213TS except two $\frac{1}{8}$ oil holes in O.D.

73—Same as A1213TS except I.D., and internal clearance .0030 - .0047.

*Rollers assembled with outer ring.

**Rollers assembled with inner ring.

74—Same as A1214TS except outer ring width, and O.D. groove in center of outer ring.

75—Same as U1214TS except $\frac{5}{16}$ blind hole in O.D.

76—Same as A1214TS except I.D., inner ring width, outer ring width, and O.D. groove in center of outer ring.

77—Same as BU1214L except O.D. and internal clearance .0045 - .0062.

78—Same as A1215TS except standard $\frac{5}{16}$ blind hole in O.D.

79—Same as BU1215L except O.D., and internal clearance .0046 - .0063.

80—Same as A1216TS except $\frac{5}{32}$ blind hole in O.D.

81—Same as R1216WB except O.D. internal clearance .0046 - .0065 and special O.D. corner notch.

82—Same as BU1216L except O.D. and internal clearance .0048 - .0067.

83—Same as 1217TS except outer ring width and O.D. groove in center of outer ring.

84—Same as A1217TS except standard $\frac{5}{16}$ blind hole in O.D.

85—Same as U1217TM except outer ring width.

86—Same as A1218WB except O.D. snap ring groove and internal clearance .0048 - .0064.

87—Same as R1218WB except O.D. snap ring groove and internal clearance .0048 - .0064.

88—Same as U1218TM except outer ring width.

*Rollers assembled with outer ring.

**Rollers assembled with inner ring.

89—Same as U1218TM except internal clearance .0034 - .0050 and $\frac{7}{16}$ blind hole in O.D.

90—Same as A1219TS except standard $\frac{7}{16}$ blind hole in O.D.

91—Same as A1219TS except O.D., internal clearance .0056 - .0076, and standard $\frac{7}{16}$ blind hole in O.D.

92—Same as 1220TS except roller diameter variation per assembly and outer ring wall variation reduced.

93—Same as A1220YS except internal clearance .0047 - .0063 and $\frac{7}{16}$ blind hole in O.D.

94—Same as R1220YS except internal clearance .0047 - .0063 and $\frac{7}{16}$ blind hole in O.D.

95—Same as R1220YS except internal clearance .0053 - .0069 and marking "gear side" on non-rib side of O.R.

96—Same as R1220YS except O.D. and internal clearance .0056 - .0076.

97—Same as R1220YS except inner ring O.D. chamfer, internal clearance .0047 - .0063 and $\frac{7}{16}$ blind hole in O.D.

98—Same as BU1220Z except internal clearance .0055 - .0071

99—Same as 1221TS except roller diameter variation per assembly and outer ring wall variation reduced.

100—Same as A1222TS except standard $\frac{7}{16}$ blind hole in O.D.

101—Same as R1222WB except O.D., and internal clearance .0060 - .0085 and $\frac{7}{16}$ blind hole in O.D.

102—Same as R1222WB except O.D., and internal clearance .0060 - .0085.

103—Same as R1222WB except I.D., O.D., and internal clearance .0060 - .0085.

104—Same as BU1222Z except internal clearance .0020 - .0045, and special roller length tolerance.

105—Same as 1224TS except roller diameter variation per assembly and outer ring wall variation reduced.

106—Same as A1224TS except inner ring width and I.D.

107—Same as R1224WB except internal clearance .0057 - .0074.

108—Same as R1224WB except internal clearance .0057 - .0074 and $\frac{7}{16}$ blind hole in O.R.

109—Same as BU1226L except outer ring width.

*Rollers assembled with outer ring.

**Rollers assembled with inner ring.

110—Same as A1230WB except for finishes and closer lateral tolerances.

111—Same as 1303TS except outer ring end runout to O.D. reduced and out-of-round with assembled end rings specified.

112—Same as 1303TM except O.D.

113—Same as A1303TS except O.D. and internal clearance .0020 - .0028.

114—Same as 1305TS except two O.D. snap ring grooves.

115—Same as 1305YS except O.D. snap ring groove.

116—Same as 1306TM except outer ring width.

117—Same as A1305YM except identification groove in O.D. to indicate grease lubrication.

118—Same as U1305TS except outer ring width and internal clearance .0015 - .0024.

119—Same as U1305TM except O.D., internal clearance .0035 - .0044 and inner ring corner radius .080.

120—Same as A1305TS except inner ring has closer "out of square and finish."

121—Same as A1305TM except internal clearance .0028 - .0039.

122—Same as U1305TM except outer ring width.

123—Same as U1305T except O.D. and outer ring width.

124—Same as 1306TM except outer ring width.

125—Same as 1306TM except O.D. snap ring groove.

126—Same as A1306TS except $\frac{9}{32}$ blind hole in O.D.

127—Same as R1306WB except O.D. and internal clearance .0024 - .0035.

*Rollers assembled with outer ring.

**Rollers assembled with inner ring.

128—Same as A1306TM except internal clearance .0024-.0035.

129—Same as U1306TM except outer ring width.

130—Same as 1307TS except roller diameter variation per assembly and outer ring wall variation reduced.

131—Same as 1307TS except O.D. snap ring groove.

132—Same as 1307TS except I.D. and O.D.

133—Same as 1307YS except O.D. snap ring groove.

134—Same as R1307WB except inner ring rib diameter 1.936, O.D. internal clearance .0027-.0038, and O.D.

135—Same as R1307WB except I.D., O.D., internal clearance .0027-.0038 and O.D. snap ring groove.

136—Same as U1307TM except inner ring corner radius .100.

137—Same as U1307TM except I.D.

138—Same as U1307TM except I.D., and outer ring width .9045.

139—Same as U1307TS except I.D., and outer ring width .9045.

140—Same as A1307TS except inner ring width 1.0000.

141—Same as BU1307Z except internal clearance .0035-.0046 and $\frac{1}{32}$ blind hole in O.D.

142—Same as BU1307Z except O.D. snap ring groove.

143—Same as A1308TS except O.D. snap ring groove.

144—Same as A1308WB except O.D. and internal clearance .0030-.0041.

145—Same as R1308WB except O.D. and internal clearance .0030-.0041.

146—Same as R1308WB except internal clearance .0012-.0018 matched bearing.

147—Same as U1308TS except O.D. snap ring groove.

148—Same as BU1308 except inner ring width and one piece bronze cage.

149—Same as BU1308 except one piece bronze cage.

150—Same as BU1308Z except internal clearance .0035-.0046 and $\frac{1}{32}$ blind hole in O.D.

*Rollers assembled with outer rings.

**Rollers assembled with inner ring.

151—Same as BU1308Z except O.D. snap ring groove.

152—Integral roller assembly with separable outer ring.

153—Same as R1308TS except I.D., and inner ring width .944.

154—Same as R1308TM except I.D., and O.D. corner chamfers .020 max.

155—Same as U1308TM except inner ring corner radius .100 and internal clearance .0022 - .0031.

156—Same as U1308TM except I.D. corner radius .100 and internal clearance .0016 - .0025.

157—Same as U1308TM except I.D.

158—Same as R1308WB except inner ring width .740, O.D., internal clearance .0030 - .0041, and side plate J1308 added.

159—Same as 1309TS except roller diameter variation per assembly and outer ring wall variation reduced.

160—Same as A1309WB except O.D.

161—Same as A1309TS except O.D. and internal clearance .0033 - .0047.

162—Same as R1309YS except O.D., internal clearance .0038 - .0052 and $\frac{1}{32}$ blind hole in O.D.

163—Same as R1309YS except O.R. rib dia. 3.220,

164—Same as R1309WB except internal clearance .0050 - .0064.

165—Same as R1309WB except O.D. snap ring groove.

166—Same as R1309WB except O.D., internal clearance .0038 - .0052 and $\frac{1}{32}$ blind hole in O.D.

167—Same as U1309TM except I.D.

168—Same as U1309TM except I.D. and inner ring corner radius .250.

169—Same as U1309TM except inner ring corner radius .187.

170—Same as BU1309L except O.D., and internal clearance .0033 - .0047.

171—Same as BU1309Z except outer ring width, internal clearance .0041 - .0055 and $\frac{1}{16}$ blind hole in O.D.

172—Same as BU1309Z except O.D., internal clearance .0033 - .0047 and standard O.D. groove.

173—Same as BU1309Z except O.D., internal clearance .0033 - .0047 and standard $\frac{1}{16}$ blind hole in O.D.

174—Same as BU1309Z except I.D.

175—Same as BU1309L except outer ring width .8200, standard $\frac{1}{16}$ blind hole in O.D. and side plate 1309J added.

176—Same as U1309TM except I.D.

177—Same as R1309WB except inner ring width .8200, inner ring corner radius replaced by .025 chamfer, and side plate J1309 added.

178—Same as R1310WB except inner ring corner radius .156.

*Rollers assembled with outer ring.

**Rollers assembled with inner ring.

- 179—Same as U1310YS except O.D., snap ring groove, reversed location.
- 180—Same as BU1310Z except internal clearance .0015 - .0029.
- 181—Same as BU1310Z except outer ring width 1.1250, internal clearance .0036 - .0050 and $\frac{7}{16}$ blind hole in O.D.
- 182—Same as R1310WB-HC except inner ring width .884 and side plate J1310-HC added.
- 183—Same as A1311TS except standard $\frac{3}{16}$ blind hole in O.D.
- 184—Same as R1311TS except O.D. and internal clearance .0039 - .0053.
- 185—Same as R1311TS except O.D., internal clearance .0039 - .0053, and O.D., snap ring groove.
- 186—Same as R1311TS except O.D., internal clearance .0039 - .0053 and O.D., snap ring.
- 187—Same as R1311WB except internal clearance .0039 - .0049 and $\frac{7}{16}$ blind hole in O.D.
- 188—Same as R1311YS except O.D., internal clearance .0039 - .0049 and $\frac{7}{16}$ blind hole in O.D.
- 189—Same as U1311YM except special finish on outer ring rib face.

- 190—Same as U1311YS except special finish on outer ring rib face.
- 191—Same as BU1311L except O.D. and internal clearance .0039 - .0053.
- 192—Same as BU1311Z except internal clearance .0039 - .0049 and $\frac{7}{16}$ blind hole in O.D.
- 193—Same as BU1311Z except O.D. snap ring groove.
- 194—Same as BU1311L except outer ring width, $\frac{7}{16}$ blind hole in O.D. and side plate 1311J added.
- 195—Same as A1311TS except I.D. and inner ring width 2.3125 with two notches.
- 196—Same as BU1311Z except inner ring corner radius .125.
- 197—Same as A1312WB except reduced length tolerances on both rings.
- 198—Same as A1312WB except O.D., internal clearance .0048 - .0059, and $\frac{7}{16}$ blind hole in O.D.
- 199—Same as A1312WB except O.D., internal clearance .0054 - .0065, and $\frac{7}{16}$ blind hole in O.D.
- 200—Same as A1312WB except I.D., O.D., internal clearance .0048 - .0059, and $\frac{7}{16}$ blind hole in O.D.
- 201—Same as A1312TGS except O.D. snap ring groove.

*Rollers assembled with outer ring.

**Rollers assembled with inner ring.

- 202—Same as R1312YS except O.D., internal clearance .0048 - .0059 and $\frac{7}{16}$ blind hole in O.D.
- 203—Same as R1312YS except I.D., inner ring corner radius .156, O.D., internal clearance .0058 - .0075 and $\frac{7}{16}$ blind hole in O.D.
- 204—Same as R1312TS except O.D., internal clearance .0041 - .0058 and O.D. snap ring groove.
- 205—Same as R1312TS except O.D., internal clearance .0041 - .0058 and O.D. snap ring.
- 206—Same as R1312WB except O.D., internal clearance .0048 - .0059 and $\frac{7}{16}$ blind hole in O.D.
- 207—Same as BU1312Z except internal clearance .0047 - .0058 and $\frac{7}{16}$ blind hole in O.D.
- 208—Same as BU1312Z except I.D.
- 209—Same as BU1312Z except internal clearance .0018 - .0029
- 210—Same as A1313TS except internal clearance .0043 - .0054 and $\frac{7}{16}$ blind hole in O.D.
- 211—Same as A1313TS except O.D., internal clearance .0041 - .0058 and standard $\frac{3}{8}$ blind hole in O.D.
- 212—Same as A1313WB except O.D., internal clearance .0041 - .0058 and standard $\frac{3}{8}$ blind hole in O.D.

- 213—Same as A1313WB except O.D., internal clearance .0051 - .0062 and standard $\frac{3}{8}$ blind hole in O.D.
- 214—Same as R1313WB except one piece bronze cage, outer ring rib diameter 4.535 with special rib I.D. finish, and internal clearance .0015 - .0021 - matched bearing.
- 215—Same as R1313WB except internal clearance .0033 - .0044.
- 216—Same as R1313WB except internal clearance .0015 - .0021 - matched bearing.
- 217—Same as R1313WB except internal clearance .0043 - .0054.
- 218—Same as R1313WB except O.D., internal clearance .0041 - .0058, and $\frac{3}{8}$ blind hole in O.D.
- 219—Same as BU1313Z except outer ring width, internal clearance .0041 - .0052 and $\frac{7}{16}$ blind hole in O.D.
- 220—Same as BU1313Z except internal clearance .0043 - .0054 and $\frac{7}{16}$ blind hole in O.D.
- 221—Same as BU1313L except outer ring width and side plate 1313J added.
- 222—Same as BU1313L except internal clearance .0015 - .0021 - matched bearing.
- 223—Same as R1313WB except inner ring width and side plate J1313 added.
- 224—Same as 1314WB except I.D. and O.D.

*Rollers assembled with outer ring.

**Rollers assembled with inner ring.

225—Same as R1314WB except O.D. and internal clearance .0046 - .0063.

226—Same as R1314YS except internal clearance .0048 - .0059 and $\frac{1}{16}$ blind hole in O.D.

227—Same as R1314YS except O.D. snap ring groove, reversed location.

228—Same as BU1314L except O.D. internal clearance .0046 - .0063 and standard $\frac{1}{16}$ blind hole in O.D.

229—Same as BU1314Z except internal clearance .0022 - .0033.

230—Same as BU1314Z except outer ring width, internal clearance .0046 - .0057 and $\frac{1}{16}$ blind hole in O.D.

231—Same as BU1314Z except internal clearance .0046 - .0057 and $\frac{1}{16}$ blind hole in O.D.

232—Same as BU1314Z except I.D. and O.D. corner radius .187, internal clearance .0021 - .0027 —matched bearing.

233—Same as R1314WB except inner ring width and side plate J1314 added.

234—Same as A1315TS except O.D., internal clearance .0048 - .0066, and standard $\frac{1}{16}$ blind hole in O.D.

235—Same as A1315WB except O.D., internal clearance .0048 - .0066, and standard $\frac{1}{16}$ blind hole in O.D.

236—Same as A1315WB except O.D., internal clearance .0061 - .0079 and standard $\frac{1}{16}$ blind hole in O.D.

237—Same as BU1315Z except outer width, internal clearance .0048 - .0066 and $\frac{1}{16}$ blind hole in O.D.

238—Same as BU1315Z except O.D., internal clearance .0048 - .0066 and O.D. snap ring groove.

239—Same as BU1315Z except I.D.

240—Same as R1315YS except inner ring width.

241—Same as 1316W except I.D. and O.D.

242—Same as A1316WB except internal clearance .0037 - .0045 —matched bearing.

243—Same as BU1316Z except internal clearance .0023 - .0039

244—Same as R1316YAS except inner ring width, O.D., internal clearance .0072 - .0088 and $\frac{1}{16}$ blind hole in O.D.

Rib diameter 3.808 x .214 wide.
• Rib diameter 4.096 x .263 wide.

*Rollers assembled with outer ring.

**Rollers assembled with inner ring.

• Denotes two roller assemblies.

261—Same as R1322WB except internal clearance .0022 - .0043.

262—Same as R1322WB except internal clearance .0054 - .0075.

263—Same as A1326WB except ½" blind hole in O.D.

264—Same as A1326WB except internal clearance .0071 - .0093 and ½" blind hole in O.D.

265—Same as A1326TS except O.D. and internal clearance .0071 - .0097.

266—Same as R1328WB except internal clearance .0082 - .0108.

267—Double row.

268—Two shields, grease fitting, internal clearance .0014 - .0025.

269—I.R. width 1.1875, two seals, tapped hole in O.D., internal clearance .0029 - .0040.

270—Two seals, internal clearance .0018 - .0027.

271—Same as U1519TS except internal clearance .0030 - .0039.

272—Same as U1519TS except internal clearance .0014 - .0023 and has grease fitting on O.D.

273—Same as U1519TS except I.D., internal clearance .0030 - .0039 and No. 12-36 tapped hole in O.D.

274—Double row, I.R. width 2.500, two seals, internal clearance .0014 - .0025.

*Rollers assembled with outer ring.

**Rollers assembled with inner ring.

275—Same as 1552TS except width.

276—Same as R1560TM except increased roller crown length and radius, and O.D. corner radius replaced by .025 chamfer.

277—Internal clearance .0057 - .0077.

278—Assembly retained by disposable sleeve.

279—Corners .015 max., internal clearance .0017 - .0025.

280—Inner ring width .7702, side plates retained by separator, pre-lubricated with code "RV" grease.

281—Inner ring width .881, disposable cover, pre-lubricated with code "RV" grease.

282— $\frac{7}{16}$ blind hole in O.D.

283—Same as BU1926L except O.D., internal clearance .0066 - .0091 and $\frac{5}{16}$ blind hole in O.D.

284—Same as BU1956L except outer ring width, O.D., internal clearance .0176 - .0216 and standard $\frac{7}{16}$ blind hole in O.D.

285—Same as BU1956Z except outer ring width, O.D., internal clearance .0176 - .0216, and standard $\frac{7}{16}$ blind hole in O.D.

286—Same as A3140WB except internal clearance .0312 - .0340.

287—Same as A3140WB except inner ring width, and internal clearance .0312 - .0340.

288—Same as A3140WB except inner ring width, and internal clearance .0335 - .0364.

*Rollers assembled with outer ring.

**Rollers assembled with inner ring.

289—Same as A3144WB except internal clearance .0335 - .0364.

290—Same as A3148WB except I.R. width.

291—Same as BU5017Z except I.D.

292—Same as A5044WB except I.D. and width.

293—Special I.D.

294—Same as BU5203L except outer ring width and side plate 5203J added.

295—Pre-lubricated with code "RV" grease.

296—Same as 5204WB except roller assembly I.D. and finishes improved on both ring and rollers.

297—Same as A1204TS except I.R. width.

298—Same as U5204TM except inner ring corner radius .100.

299—Same as 5205YS except O.D., roller assembly I.D., and separator nicarbated.

300—Same as U5205TM except inner ring corner radius .093.

301—Same as U5205TM except inner ring corner radius .125.

302—Same as U5205YM except inner ring corner radius .125.

303—Same as A5206 except has $\frac{1}{8}$ radial hole.

304—Same as A5206TS except O.D. and internal clearance .0024 - .0035.

305—Assembly retained by disposable sleeve.

306—Same as U5206TM except O.D. and outer ring width .8825.

307—Same as U5206YM except inner ring corner radius .140.

308—Same as U5206TM except inner ring corner radius .100.

309—Same as UB5206TM except O.D.

310—Same as U5206YM except inner ring corner radius .100.

*Rollers assembled with outer ring.

**Rollers assembled with inner ring.

311—Same as 5207WB except two O.D. grooves.

312—Same as U5207YM except internal clearance .0016 - .0025.

313—Same as U5207YM except inner ring corner radius .156 and internal clearance .0016 - .0025.

314—Same as A5207TS except inner ring width, and internal clearance .0018 - .0029.

315—Same as A5209 except has $\frac{1}{8}$ radial hole.

316—Same as A5209TS except inner ring width, and internal clearance .0021 - .0035.

317—Same as A5209TS except I.D., inner ring width and two notches in the inner ring.

318—Same as A5209TS except runouts and wall variation reduced on both rings, and internal clearance .0013 - .0017 —matched bearing.

319—Same as A5210TS except I.D.

320—Same as A5210TS except inner ring width, I.D., I.D. corner radius replaced by .078 chamfer, and internal clearance .0030 - .0044.

321—Same as A5211TS except standard $\frac{1}{16}$ blind hole in O.D.

322—Same as R5211WB except O.D., and internal clearance .0037 - .0051.

323—Same as A5211TS except inner ring width.

324—Same as BU5211L except O.D., and internal clearance .0037 - .0051.

325—Same as A5211WB except inner ring width, O.D. internal clearance .0037 - .0051 and side plate J5211 added.

326—Same as A5212TS except internal clearance .0039 - .0055 and $\frac{1}{8}$ blind hole in O.D.

327—Same as A5212TS except standard $\frac{1}{16}$ blind hole in O.D.

*Rollers assembled with outer ring.

**Rollers assembled with inner ring.

- 328—Same as A5212TS except runouts and wall variation reduced on both rings, and internal clearance .0015 - .0019 — matched bearing.
- 329—Same as BU5212L except O.D., and internal clearance .0040 - .0056.
- 330—Same as R5212WB except inner ring width and side plate J5212 added.
- 331—Same as A5213TS except inner ring width and I.D., with two notches, and internal clearance .0030 - .0047.
- 332—Same as A5213TS except internal clearance .0033 - .0050.
- 333—Same as U5213TM except I.D. and outer ring has 30° bevel on one side.
- 334—Same as BU5214L except magnetic particle inspection of ring added.
- 335—Same as A5214TS except standard $\frac{5}{16}$ blind hole in O.D.
- 336—Same as U5214TS except $\frac{5}{16}$ blind hole in O.D.
- 337—Same as BU5214Z except O.D. and internal clearance .0045 - .0062.
- 338—Same as A5215TS except standard $\frac{5}{16}$ blind hole in O.D.

- 339—Same as A5215TS except O.D. and internal clearance .0046 - .0063.
- 340—Same as A5215TS except internal clearance .0036 - .0053.
- 341—Same as BU5215Z except standard $\frac{5}{16}$ blind hole in O.D.
- 342—Same as A5216WB except inner ring width and internal clearance .0081 - .0100.
- 343—Same as A5216WB except inner ring width with one notch , I.D., and internal clearance .0081 - .0100.
- 344—Same as A5216TS except standard $\frac{5}{16}$ blind hole in O.D.
- 345—Same as A5217WB except inner ring width and internal clearance .0086 - .0102.
- 346—Same as A5217TS except I.D.
- 347—Same as A5217TS except matched bearing, internal clearance .0041 - .0049.
- 348—Same as A5217TS except standard $\frac{5}{16}$ blind hole in O.D.
- 349—Same as U5217TS except $\frac{5}{16}$ blind hole in O.D.
- 350—Same as A5218WB except inner ring width and internal clearance .0075 - .0091.

*Rollers assembled with outer ring.

**Rollers assembled with inner ring.

351—Same as A5218WB except inner ring width, with one notch, I.D., and internal clearance .0093 - .0109.
 352—Same as A5218TS except standard $\frac{7}{16}$ blind hole in O.D.
 353—Same as BU5218Z except standard $\frac{7}{16}$ blind hole in O.D.
 354—Same as A5218TS except I.D. and inner ring width with two notches.
 355—Same as A5219TS except $\frac{7}{16}$ blind hole in O.D.
 356—Same as A5219WB except inner ring width and internal clearance .0100 - .0116.
 357—Same as A5219WB except internal clearance .0100 - .0116.
 358—Same as A5220WB except inner ring width and internal clearance .0108 - .0124.
 359—Same as A5220WB except inner ring width internal clearance .0108 - .0124 and one $\frac{7}{16}$ oil hole in outer ring.
 360—Same as A5220TS except standard $\frac{7}{16}$ blind hole in O.D.
 361—Same as A5220TS except internal clearance .0043 - .0059.
 362—Same as A5220WB except I.D., inner ring width, internal clearance .0108 - .0124, single notch I.R., and $\frac{7}{16}$ thru hole in O.D.
 363—Same as A5222TS except internal clearance .0048 - .0073.

364—Same as A5222TS except two $\frac{3}{16}$ oil holes in outer ring.
 365—Same as A5222TS except matched bearing, internal clearance .0045 - .0053.
 366—Same as A5222WB except inner ring width and internal clearance .0117 - .0142.
 367—Same as A5222WB except I.D., inner ring width, single notch I.R. and internal clearance .0117 - .0142.
 368—Same as A5222WB except internal clearance .0117 - .0142.
 369—Same as BU5222Z except outer ring width and internal clearance .0117 - .0142.
 370—Same as A5224TS except $\frac{9}{16}$ hole thru outer ring, internal clearance .0037 - .0054.
 371—Same as A5224WB except inner ring width and internal clearance .0125 - .0142.
 372—Same as A5224WB except inner ring width with one notch, I.D., and internal clearance .0125 - .0142.
 373—Same as A5226WB except inner ring width and internal clearance .0138 - .0160.
 374—Same as A5226WB except inner ring width with one notch, I.D., and internal clearance .0138 - .0160.

*Rollers assembled with outer ring.

**Rollers assembled with inner ring.

375—Same as A5226WB except internal clearance .0138 - .0160.
 376—Same as A5226TS except internal clearance .0051 - .0069.
 377—Same as A5226TS except two $\frac{3}{8}$ " oil holes in outer ring.
 378—Same as A5226TS except I.D., I.R. width, one I.R. notch, two $\frac{3}{8}$ " thru holes in O.R., and internal clearance .0138 - .0156.
 379—Same as A5228WB except inner ring width and internal clearance .0147 - .0169.
 380—Same as A5228WB except internal clearance .0147 - .0169.
 381—Same as A5230WB except inner ring width with one notch, I.D., and internal clearance .0166 - .0188.
 382—Same as A5230WB except inner ring width and internal clearance .0166 - .0188.
 383—Same as A5230WB except internal clearance .0166 - .0188.
 384—Same as A5230TS except internal clearance .0062 - .0084.
 385—Same as A5230TS except internal clearance .0150 - .0172.
 386—Same as A5232WB except inner ring width and internal clearance .0180 - .0203.

387—Same as A5232WB except inner ring width, with one notch, I.D., and internal clearance .0180 - .0203.
 388—Same as A5232WB except internal clearance .0180 - .0203.
 389—Same as A5234TS except internal clearance .0071 - .0095.
 390—Same as A5234TS except I.D. and inner ring width.
 391—Same as A5234WB except inner ring width and I.D.
 392—Same as A5236WB except inner ring width, I.D., and internal clearance .0270 - .0293.
 393—Same as A5236WB except inner ring width and internal clearance .0270 - .0293.
 394—Same as A5236WB except internal clearance .0270 - .0293.
 395—Same as A5238WB except inner ring width and internal clearance .0292 - .0320.
 396—Same as A5238WB except internal clearance .0292 - .0320.
 397—Same as A5240TS except two $\frac{1}{2}$ " oil holes in outer ring.
 398—Same as A5240TS except O.D. has center groove $\frac{1}{8}$ " wide containing two $\frac{1}{2}$ " radial holes thru O.R.
 399—Same as A5240WB except inner ring width and internal clearance .0309 - .0337.
 400—Same as A5240WB except internal clearance .0309 - .0337.
 401—Same as BU5244Z except internal clearance .0160 - .0189.

ROLLER BEARING DIMENSIONAL DATA

NDH WOUND HY-ROLL BEARINGS

Wound Hy-Roll Bearings are made in two basic types:

1. Solid Ring Bearings

Solid Outer and Inner Rings (Plain or Notched) and full roller complement type roller assemblies. All component parts separable.

2. Split Outer Ring Bearings

Split Outer Ring and bar-between-roller type roller assembly. Sizes 3½" bore and over available with solid inner rings and full-roller-complement type roller assemblies. All component parts separable.

Solid Ring Bearings

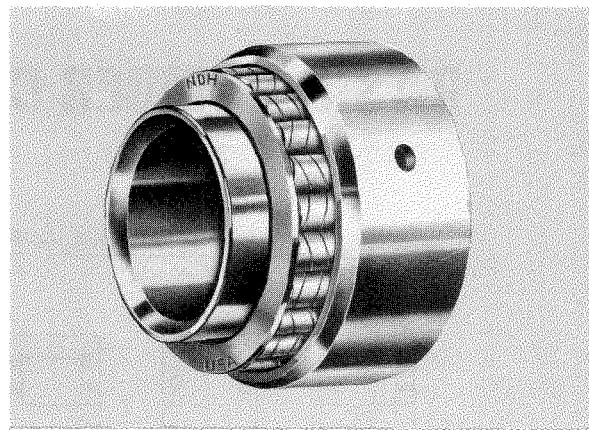

The standard bearing number usually contains three digits and indicates the size of the bearing. If the first digit is 2 the bearing belongs to the 200 series. If the first digit is 3 the bearing belongs to the 300 series. The last two digits indicate the bore diameter in millimeters when multiplied by five. For example, a 310 bearing would have a bore diameter of 10 X 5 or 50 mm. A 215 bearing would have a bore diameter of 15 X 5 or 75 mm.

The above rule does not apply to notched inner ring bearings in which the bores are made to inches and even fractions of an inch.

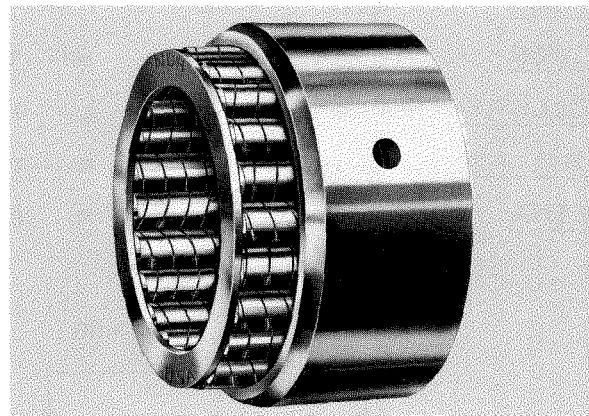

Split Ring Bearings

Split Ring Bearings may be identified by the individual part numbers stamped on the inner and outer rings and by the number stamped on the roller assembly end rings as explained in tables VI and VII.

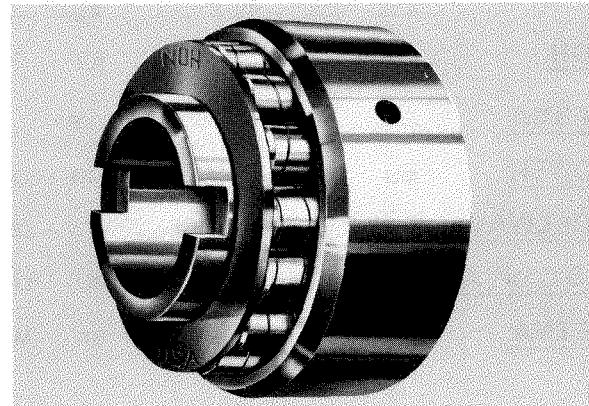

Split outer ring part numbers always contain four numerals in the 4000 series. Solid inner rings, where used, carry five digit numbers in the 30000 and 32000 series.

Wound Hy-Roll bearing with solid inner and outer rings

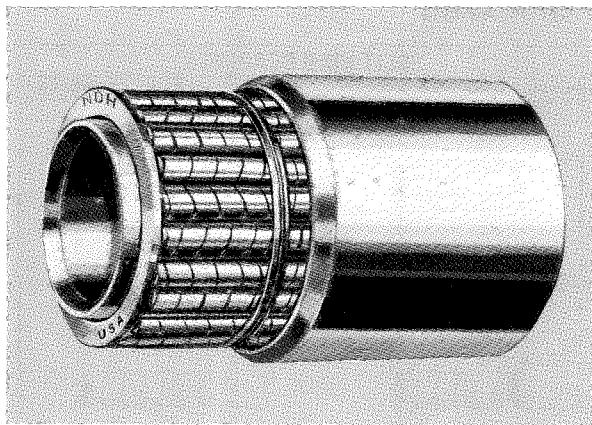

Wound Hy-Roll bearing with solid outer ring and no inner ring

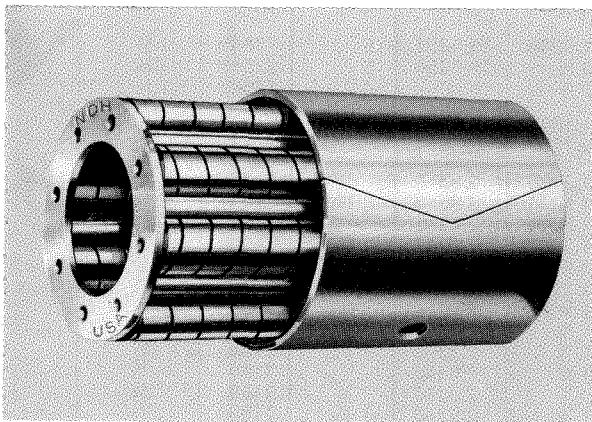

Wound Hy-Roll bearing with solid outer ring and notched inner ring

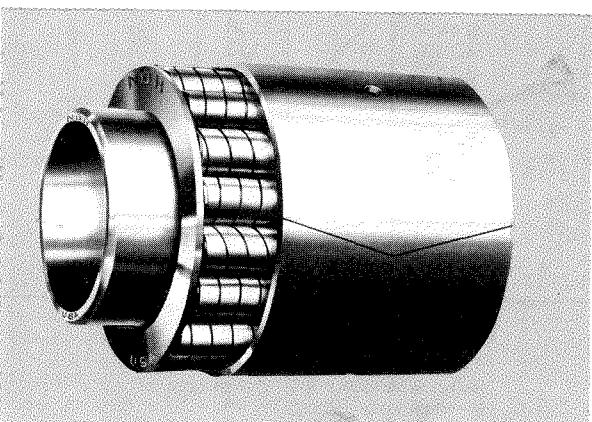

NDH WOUND HY-ROLL BEARINGS

Wound Hy-Roll bearing with solid inner and outer rings and dual roller assemblies

Wound Hy-Roll bearing with split outer ring and no inner ring

Wound Hy-Roll bearing with split outer ring and solid inner ring

The bearing number by itself indicates a complete bearing of standard narrow width. Prefix letters are used to indicate widths other than the standard narrow as follows:

- N = Special narrow series
- S = Special Dimensions
- W = Wide Series
- SW = Special Wide Series
- D = Double Wide Series
- SD = Special Double Wide Series

The width prefixes are used with the bearing number to describe the complete bearing as:

N306, S240, W212, D217, SW226

also with the bearing number and prefix C to describe the bearing with the inner ring omitted:

NC306, CS240, CW212, CD217, CSW226

also with the bearing number and the component part prefix letters to describe the component parts as:

NIR306, SIR240, WOR212, DIR217, SWRA226.

Bearings with notched inner rings are identified by the prefix T in the complete bearing part number. This symbol may be combined with the width symbol as in TM312, or TW213. Variations of a basic size are designated by an extra prefix symbol as in TW213, TXW213, TYW213. Notched inner rings are individually identified by five digit part numbers as 30410, 30397, etc.

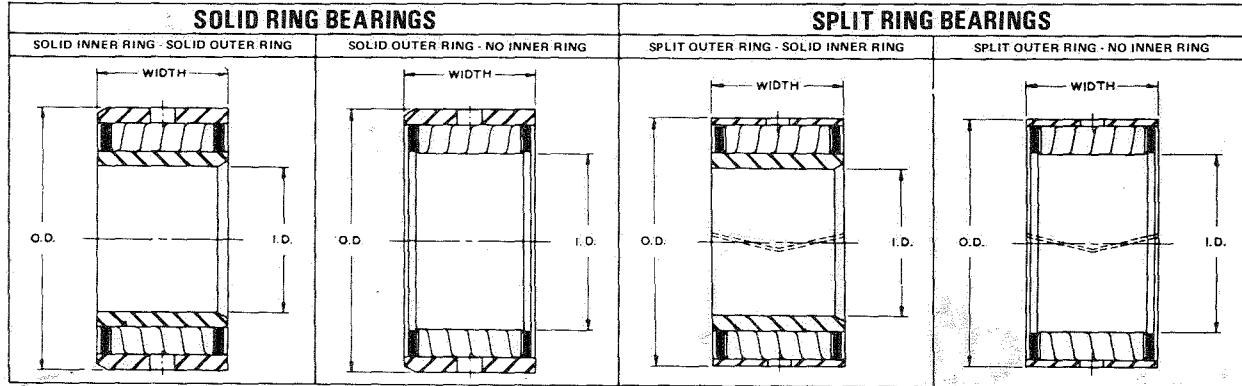

The following prefix letters also have a general significance.

- C = Omission of inner ring.
Thus bearing 312 with inner ring omitted becomes C312.
- E = Omission of outer ring.
- IR = Inner Ring
- OR = Outer Ring
- RA = Roller Assembly

| For example: | Inner | | | |
|--------------|--------|--------|----------|---------|
| IR No. | OR No. | RA No. | Complete | Ring |
| IR-206 | OR-206 | RA-206 | 206 | Omitted |
| IR-310 | OR-310 | RA-310 | 310 | C-310 |

• Denotes two roller assemblies.

- 1—Inner ring width 2 $\frac{1}{2}$ with one notch.
- 2—Inner ring width 1 $\frac{1}{2}$.
- 3—Inner ring width 2 $\frac{1}{2}$ with one notch.
- 4—Inner ring width 2 $\frac{1}{2}$ with one notch.
- 5—Inner ring width 2 $\frac{3}{8}$ with one notch.
- 6—Inner ring width 1 $\frac{1}{16}$ with two notches.

- 7—Inner ring width 2 $\frac{3}{4}$.
- 8—Inner ring width 2 $\frac{3}{4}$ with one notch.
- 9—Inner ring width 2 $\frac{1}{2}$.
- 10—Inner ring width 2 $\frac{1}{2}$ with one notch.
- 11—Inner ring width 2 $\frac{1}{2}$ with one notch.
- 12—Has $\frac{3}{16}$ radial hole.

*Denotes two roller assemblies.

1—Inner ring width 6 $\frac{1}{2}$ with one notch.

2—Has $\frac{1}{8}$ wide O.D. groove.

3—Inner ring width 7 $\frac{1}{2}$ with one notch.

4—Inner ring width 2 $\frac{1}{2}$ with one notch.

5—Inner ring width 2 $\frac{1}{2}$ with one notch.

6—Inner ring width 2 $\frac{1}{2}$ with one notch.

7—Inner ring width 2 $\frac{1}{2}$ with one notch.

8—Inner ring width 2 $\frac{3}{4}$ with one notch.

9—Inner ring width 2 $\frac{1}{2}$ with one notch.

10—Inner ring width 2 $\frac{3}{4}$ with one notch.

11—Inner ring width 2 $\frac{3}{4}$ with one notch.

12—Inner ring width 3 with one notch.

NDH 90000 SERIES SOLID HY-ROLL BEARINGS

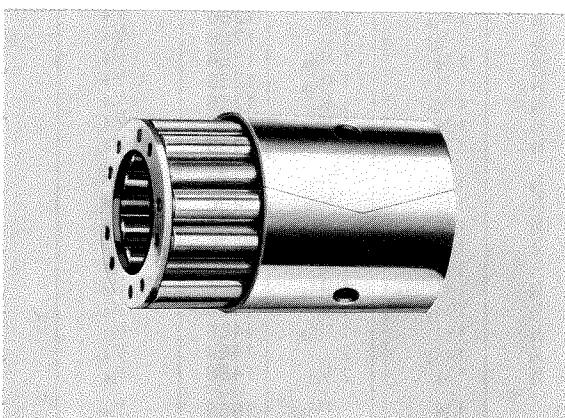

90000 series Hy-Roll assembly

99200 and 99300 series Hy-Roll bearings

S 90000 series solid outer ring
Hy-Roll bearing

HP 90000 series split outer ring
Hy-Roll bearing

92000 93000 94000 95000 96000 Series

The bearing number contains five digits, the first of which is always 9.

The second digit indicates the roller diameter. When this is 2 the roller diameter is $\frac{5}{32}$ ". When the digit is 3, the roller diameter is $\frac{3}{16}$ ". When it is 4, 5 or 6, the roller diameter is $\frac{1}{4}$ ", $\frac{5}{16}$ " or $\frac{3}{8}$ ".

The third digit denotes the shaft diameter in the following manner:

| Third Digit | Shaft Diameter |
|-------------|------------------|
| 1 | $\frac{1}{2}$ " |
| 2 | $\frac{5}{8}$ " |
| 3 | $\frac{3}{4}$ " |
| 4 | $\frac{7}{8}$ " |
| 5 | 1" |
| 6 | $1\frac{1}{8}$ " |
| 7 | $1\frac{1}{4}$ " |
| 8 | $1\frac{3}{8}$ " |
| 9 | $1\frac{1}{2}$ " |

The fourth and fifth digits give the bearing length in sixteenths of an inch.

The five digit number by itself, denotes a roller assembly only, with no outer ring.

The bearing number with the prefix S, denotes a bearing consisting of a roller assembly and solid outer ring.

The bearing number with the prefix HP, denotes a bearing consisting of a roller assembly and split outer ring.

99000 Series—all special dimension bearings. Identify by dimensions and end ring numbers. See Tables VI and VII.

99200 and 99300 Series

The bearings in these two series are solid roller replacements of the wound Hy-Roll 200 and 300 series; thus 99210 is interchangeable with 210 and 99311 with 311, etc.

*Denotes two roller assemblies.

- 1—Inner ring width 2 1/2 with one notch.
- 2—Inner ring width 2 1/2 with one notch.
- 3—Inner ring width 2 1/2 .
- 4—Inner ring width 2 1/2 with one notch.
- 5—Inner ring width 1 7/8 .
- 6—Inner ring width 2 1/2 with one notch.
- 7—Inner ring width 2 1/2 with one notch.
- 8—Inner ring width 2 1/2 with one notch.

- 9—Inner ring width 1 7/16 with two notches.
- 10—Inner ring width 2 1/2 with one notch.
- 11—Inner ring width 2 3/4 with one notch.
- 12—Inner ring width 2 1/2 with one notch.
- 13—Inner ring has 3/16 oil hole.
- 14—Inner ring width 1 13/16 with two notches.
- 15—Inner ring has 3/16 oil hole.
- 16—Inner ring width 3.
- 17—Inner ring width 2 with two notches.

* Denotes two roller assemblies.

- 1—Inner ring width 2 $\frac{1}{8}$ with two notches.
- 2— $\frac{1}{8}$ oil hole in inner ring.
- 3—Inner ring width 3 $\frac{1}{2}$ with one notch.
- 4—Inner ring width 2 $\frac{1}{4}$ with two notches.
- 5—Inner ring width 3 $\frac{1}{2}$ with one notch.
- 6—Inner ring width 2 $\frac{5}{8}$ with two notches.
- 7—Inner ring width 2 $\frac{5}{8}$ with two notches.

8— $\frac{1}{4}$ oil hole in inner ring.

9—Inner ring width 3 $\frac{3}{8}$ with one notch.

10—Inner ring width 2 $\frac{15}{16}$ with two notches.

11—Inner ring width 3 $\frac{3}{8}$ with one notch.

12— $\frac{3}{16}$ oil hole in inner ring.

13—Inner ring width 3 $\frac{1}{2}$

*Not a saleable item. Part Numbers and Dimensions are shown for reference purposes only.

• Denotes two roller assemblies.

1—Inner ring width 4 $\frac{3}{8}$ with one notch.

2—Inner ring width 4 $\frac{3}{8}$ with one notch.

3—Inner ring width 3 $\frac{5}{8}$ with two notches.

4—Inner ring width 3 $\frac{5}{8}$ with two notches.

5—Inner ring width 4 $\frac{3}{8}$ with one notch.

6—Inner ring width 4 $\frac{3}{8}$ with one notch.

7—Inner ring width 3 $\frac{5}{8}$ with two notches.

8—Inner ring width 3 $\frac{5}{8}$ with two notches.

9—Inner ring width 4 $\frac{3}{8}$ with two notches.

10—Inner ring width 4 $\frac{3}{8}$ with two notches.

11—Inner ring width 5 $\frac{5}{8}$ with one notch.

* Denotes two roller assemblies.

- 1—Inner ring width 5 1/8 with two notches.
- 2—Inner ring width 5 1/8 with two notches.
- 3—Inner ring width 5 1/8 with two notches.
- 4—Inner ring width 5 1/8 with one notch.
- 5—Inner ring width 5 1/8 with one notch.
- 6—Inner ring width 5 1/8 with one notch.
- 7—Inner ring width 5 1/2

- 8—Inner ring width 5 1/2 with one notch.
- 9—Inner ring width 5 1/2
- 10—Inner ring width 6 1/2
- 11—Inner ring width 6 1/2 with one notch.
- 12—Inner ring width 6 1/2 with one notch, outer ring has 7/8 wide O.D. groove.
- 13—Inner ring width 7 1/2 with one notch.

*Not a saleable item. Part Numbers and Dimensions are shown for reference purposes only. • Denotes two roller assemblies.

1—Inner ring width 7 $\frac{1}{2}$ with one notch.

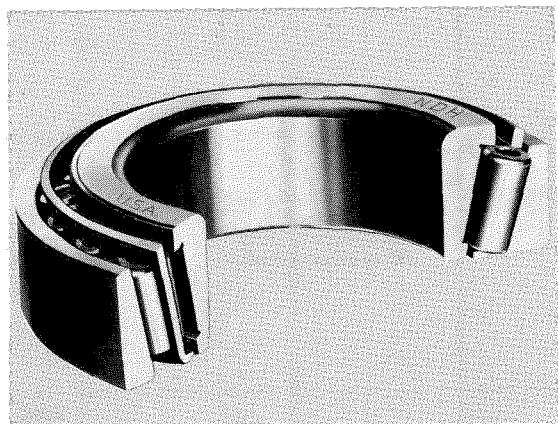

2—Inner ring width 2 $\frac{1}{2}$ with one notch.

3—Inner ring width 2 $\frac{1}{2}$ with one notch.

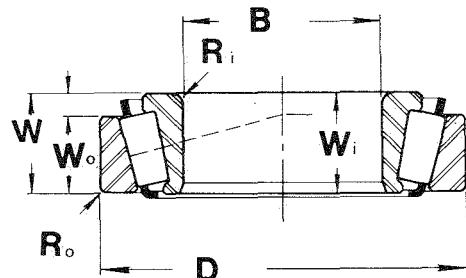

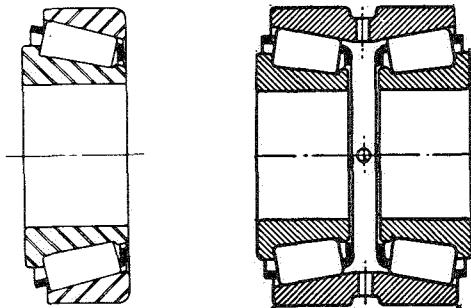

4—Inner ring width 3 with one notch.

5—Inner ring width 3 $\frac{3}{8}$ with one notch.

NDH TAPERED HY-ROLL BEARINGS

Tapered Hy-Roll bearing

This tabulation lists complete bearing assembly numbers. Components may be purchased separately.

EXAMPLE: Cone separator and roller assembly 2777
Cup, only 2720
Complete assembly 2777/2720

†Same as L812148/L812111/D1 except spacer .110/.120 in place of .107/.123

‡Consists of L812148/L812111/D2 plus one loose service cup spacer.

• Two 39590/39521 bearings with outer and inner spacers.

NDH BARREL HY-ROLL BEARINGS

Barrel hy-roll bearing

NDH Barrel bearings are made in three different types.

1. Single Row—two part bearing, rollers assembled with one ring, the other ring separable.

2. Double Row—non-separable.

3. Steering Gear—two part bearing, no inner ring, roller assembly and outer ring separable.

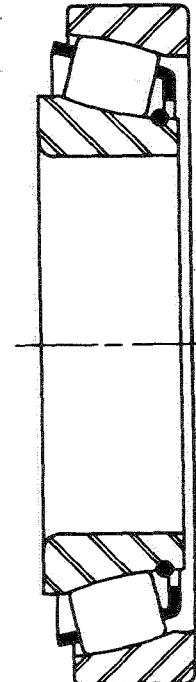

In Type 1 above the inner ring is stamped with the inner ring prefix symbol followed by the basic bearing number, as A 11360, B 11786, etc. The outer ring is stamped with the basic number followed by the suffix symbol thus 11360 Z, 11786 Y. The complete bearing is formed by combining the two numbers and prefixing the combination with symbol K, thus KA 11360 Z, KB 11786 Y. The K is a roller symbol and its association with the inner ring symbol indicates that the rollers are assembled with the inner ring.

In Type 2 the procedure is the same except the roller symbol K is omitted because the bearing is non-separable. Example A 25209 Z, etc.

In Type 3 only the outer ring is stamped with the basic number and suffix symbol. The roller assembly obviously cannot be stamped.

Bearings of this type are mounted in pairs, one above and one below the worm, the upper bearing consisting of a roller assembly and outer ring and the lower bearing being a roller assembly only running on the curved inside surface of the adjusting nut. Order by part number stamped on the ring stating what is required, i.e., "Complete bearing with outer ring part number", or, "Roller Assembly only", or "Outer Ring part number only."

ROLLER BEARING DIMENSIONAL DATA

IDENTIFICATION OF NDH HY-ROLL BEARINGS BY DIMENSIONS

The following table lists all Hy-Roll Bearings (except Metric Hy-Roll, Barrel and Taper Hy-Roll) by size, according to the inside diameter of the roller assembly. This dimension is given in the sixth column headed "Inside Diameter" under the general heading of "Roller Assembly" and is the nominal diameter of the shaft where no inner ring is used. If an

inner ring is used, this dimension is the same as the outside diameter of the inner ring.

This table should be used when it is necessary to identify an NDH Bearing by the dimensions of the roller assembly.

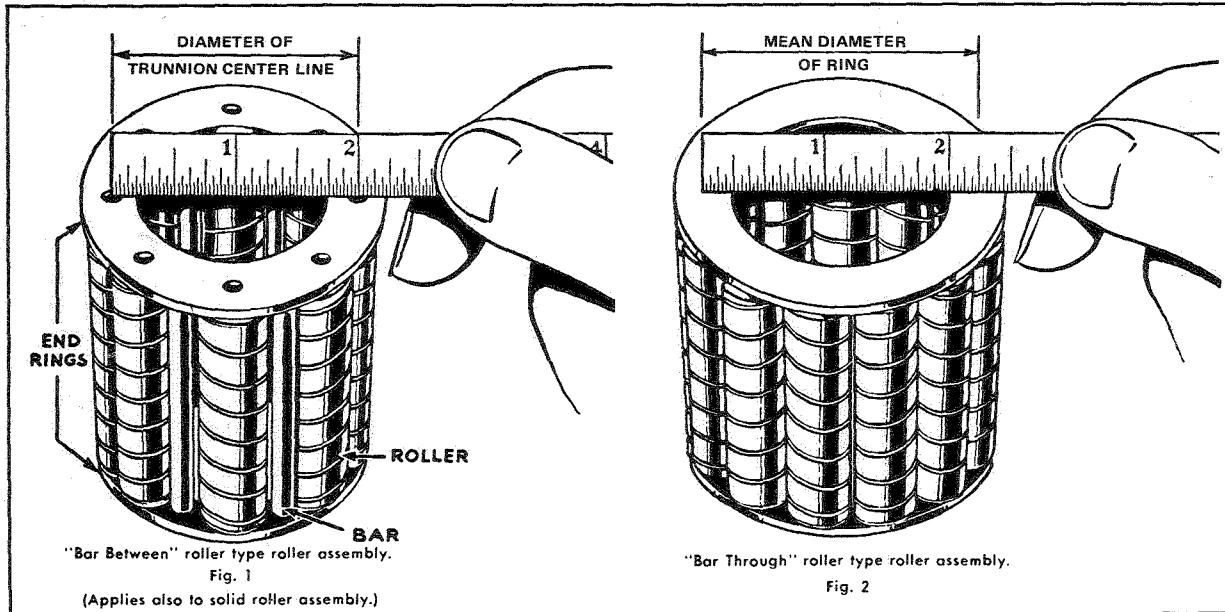

If roller assembly end ring number is available see End Ring Table VII.

If end ring numbers are not available proceed as follows:

Determine if assembly is of the "bar between" or "bar through" roller type.

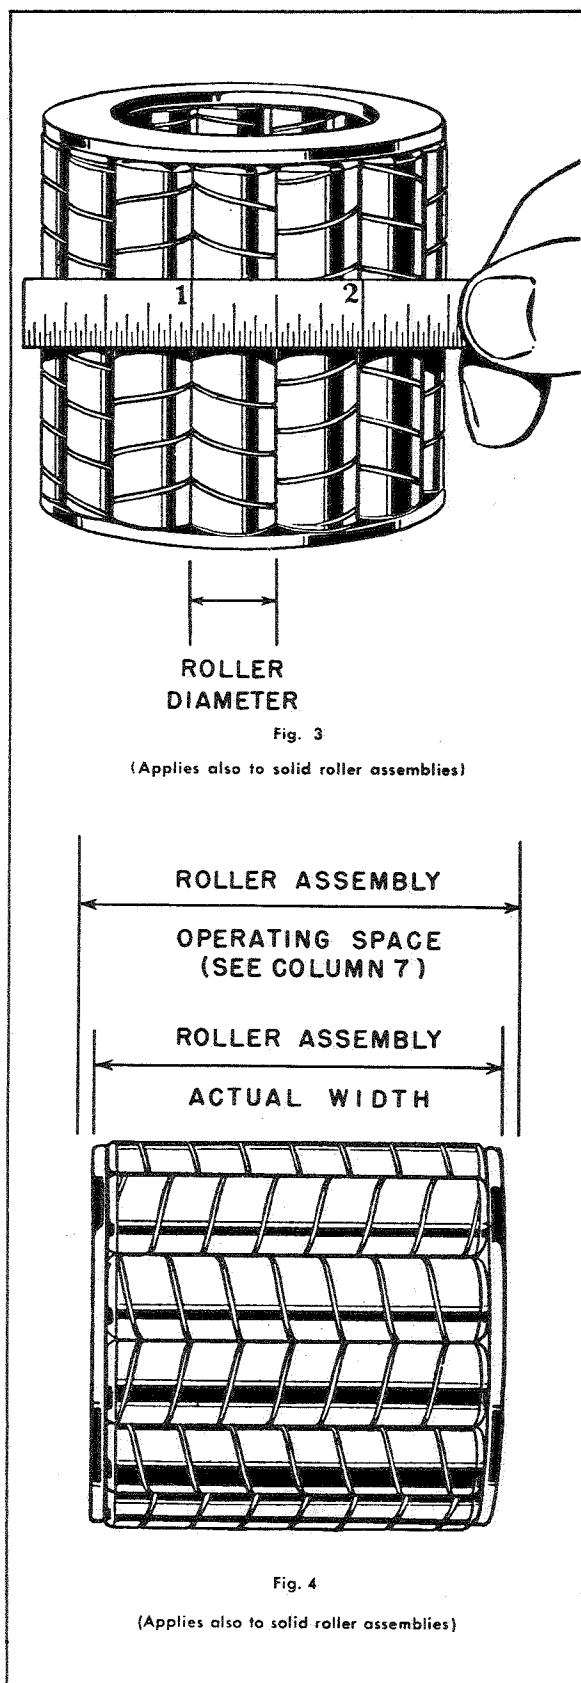

- A. If the roller assembly is of the "bar between" type, measure diameter from center of trunnion rivet to center of opposite trunnion rivet and diameter of roller. Subtract diameter of one roller from diameter of trunnion center lines to obtain roller assembly inside diameter. Locate this dimension in column six, and roller diameter in column eight. Measure length of roller assembly and locate the dimension in column seven*. Check number of rollers, (column nine) and type of roller assembly, (column ten).
- B. If the roller assembly is of the "bar through" type, measure the diameter of the center of the ring, that is, the mean diameter. (This is the diameter of the centers of bars on which the rollers are assembled.) Measure roller diameter. Subtract diameter of one roller from mean diameter of ring to obtain roller assembly inside diameter. Locate this dimension in column six, and roller diameter in column eight, then proceed as under "A" above.
- C. In most cases it will be found that the same roller assembly is used in several bearings. If the roller assembly alone is required, order by roller assembly part number. If complete bearing is required, identify by inner and outer ring dimensions and details.

*This length dimension is slightly less than the dimension given in column seven, which is actually the roller assembly operating space—that is, the actual roller assembly length plus running clearance. See explanation preceding Table VII and Fig. 5.

New Departure Hyatt
ROLLER BEARING DIMENSIONAL DATA

Page 59

Explanation of Table VI.

- Column 1—Complete bearing number. Roller Assembly part number if roller assembly is not used in combination with outer or inner ring, or both.
- Column 2—Inner Ring outside diameter. Same as Column six. Nominal shaft diameter where no inner ring is used.
- Column 3—Inner Ring inside diameter.
- Column 4—Inner Ring width.
- Column 5—Inner Ring part number.
- Column 6—Roller Assembly inside diameter. Nominal shaft diameter where no inner ring is used. Same as Column one where inner ring is used.
- Column 7—Roller Assembly operating space.
- Column 8—Roller Diameter. Measured to the nearest 1/32".
- Column 9—Number of Rollers in the assembly.
- Column 10—End Ring Number. (For identification of Roller Assemblies by end ring numbers see Table VII.)
- Column 11—Roller Assembly Type: BB—"bar between" roller. BT—"bar through" roller.
- Column 12—Roller Assembly part number.
- Column 13—Outer Ring outside diameter.
- Column 14—Outer Ring inside diameter. Also the nominal outside diameter of roller assembly.
- Column 15—Outer Ring width.
- Column 16—Type of Outer Ring: S—Solid. (See Table VIII.) P—Split (often referred to as "planished" type).
- Column 17—Outer Ring part number.

Measurements as above apply to wound and solid roller assemblies.

TABLE VII
IDENTIFICATION OF NDH HY-ROLL ROLLER ASSEMBLIES
BY END RING NUMBERS

For identification of roller assemblies by dimensions see Table VI.

Most NDH Roller Assembly end rings are stamped with end ring part number. This number is not the roller assembly part number. To find roller assembly part number, locate the known end ring numbers in the table following, measure actual length of roller assembly and select roller assembly part number which appears against those dimensions. Check by ring and roller diameters and by the number of rollers.

Explanation of Table VII.

Column 1—End Ring Number—Stamped on both end ring outside faces.

Column 2—End Ring Inside Diameter—Actual

Column 3—End Ring Outside Diameter—Actual

Column 4—Number of Rollers.

Column 5—Roller Diameter.

Column 6—Roller Assembly actual length.
This dimension is slightly less than the nominal length which is understood to be the roller assembly operating space.

Column 7—Roller Assembly operating space.
Usually referred to as Bearing Width. Slightly greater than actual Roller Assembly length.

Measurements as above apply to solid and wound roller assemblies.

TABLE VIII
IDENTIFICATION OF NDH HY-ROLL SOLID RINGS BY DIMENSIONS

Although every NDH Hy-Roll Solid Ring is stamped with the proper part number, it may sometimes be necessary to verify the part number by checking it against the dimensions of the ring.

Table VIII gives the dimensions and descriptions of all NDH Hy-Roll cylindrical solid

rings, except Metric Hy-Roll, according to the outside diameter.

The part numbers beginning with Symbol "IR", and all numbers in the 30000 and 32000 series are inner rings. All part numbers beginning with Symbol "OR", and all numbers in the 31000, 33000 and 35000 series are outer rings.

Key to Symbols Used

I.C. — Inside Chamfer

1-L — One Lug

O.C. — Outside Chamfer (2-O.C. — Two outside chamfers)

1-RH — One Rivet Hole

1-H — One Hole (2-H — Two Holes)

1-O.D.Gr. — One Groove on outside diameter

1-N — One Notch (2-N — Two Notches)

I.R. — Inside Radius

1-BH — One Blind Hole

On all rings, edges are slightly rounded; only heavy chamfers are indicated by I.C. or O. C. in the descriptive column.

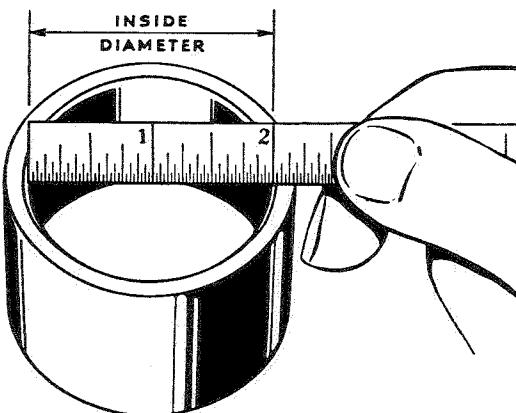

Fig. 8

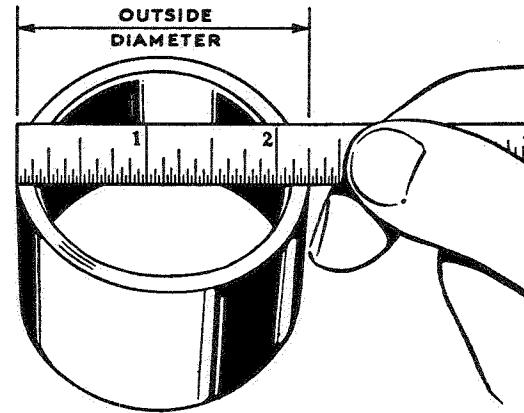

Fig. 9

Measurement of solid inner ring inside and outside diameters. A solid inner ring of the simplest form with one heavy inside chamfer, all corners slightly rounded. Solid inner rings are made up with a variety of chamfers, holes, notches, lugs, etc., as described in following table, column 4.

Inside and outside diameters of solid outer ring measured the same way.

TABLE VIII
IDENTIFICATION OF NDH HY-ROLL SOLID RINGS BY DIMENSIONS

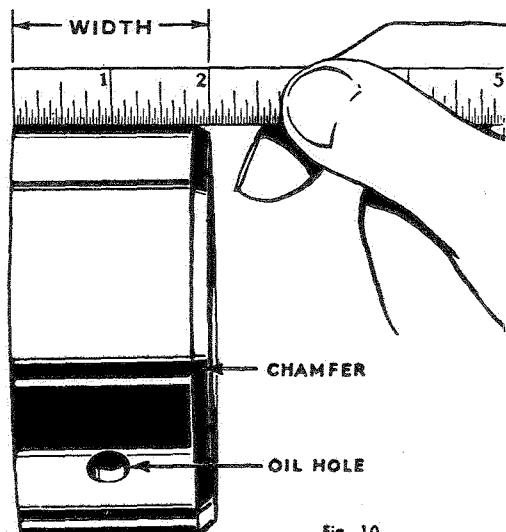

Fig. 10

Measuring the width of solid outer ring. A solid outer ring with one heavy outside chamfer and two holes on center line diametrically opposite. Outer rings are made up with a variety of chamfers, holes, grooves, etc., as described in following table, column 4.

Width of solid inner ring measured the same way.

TABLE X
NUMERICAL LIST OF NDH HY-ROLL SPLIT OUTER RINGS WITH COMPLETE BEARINGS TO WHICH THEY APPLY

NDH Hy-Roll Split Outer Rings are made with a variety of holes, slits, etc. Each ring is stamped with the part number on the outside diameter. These part numbers with the part numbers of complete bearings to which they apply are listed in the following table.

| Split Outer Ring No. | Bearings Applied | Split Outer Ring No. | Bearings Applied | Split Outer Ring No. | Bearings Applied |
|----------------------|---------------------------------------|----------------------|---------------------------------|----------------------|------------------------------------|

ROLLER BEARING ENGINEERING DATA

The engineering data provided in this publication relating to capacity ratings for NDH Hy-Roll Bearings is limited to general information. The actual calculations of bearing loads is a broad subject. The New Departure

Hyatt Roller Bearing General Catalog RC-3 contains detailed instructions on calculating bearing life. The balance of the information deals with bearings fitting practice.

ROLLER BEARING ENGINEERING DATA

LIFE - LOAD - SPEED RELATIONSHIP

With proper mounting and fitting practice and under clean, well lubricated operating conditions, wear does not take place in a roller bearing to a degree that will affect performance. Normal bearing failure will occur as pitting of the rolling surfaces due to fatigue.

For roller bearings, there is an exponential relationship of load to life which can be expressed as follows:

$$\text{Life} \propto \frac{1}{(\text{Load})^{1/6}}$$

Thus, if the load on a bearing is doubled, its life expectancy will be reduced to about one-tenth of what it was previously.

The life of a bearing in cycles of stress is considered to be independent of the rate of stress application or speed. Therefore, the life in hours of operation is decreased in direct proportion to increased speed. The relationship of life to speed is then:

$$\begin{aligned} \text{Life} &\propto \frac{1}{(\text{Speed})} \\ \text{Furthermore, } \text{Life} &\propto \frac{1}{(\text{Load})^{1/6}} \times \frac{1}{(\text{Speed})} \\ \text{and so, } \text{Load} &\propto \frac{1}{(\text{Speed})^{9/10}} \text{ for a given life.} \end{aligned}$$

This last equation establishes the relationship between bearing load ratings at different speeds.

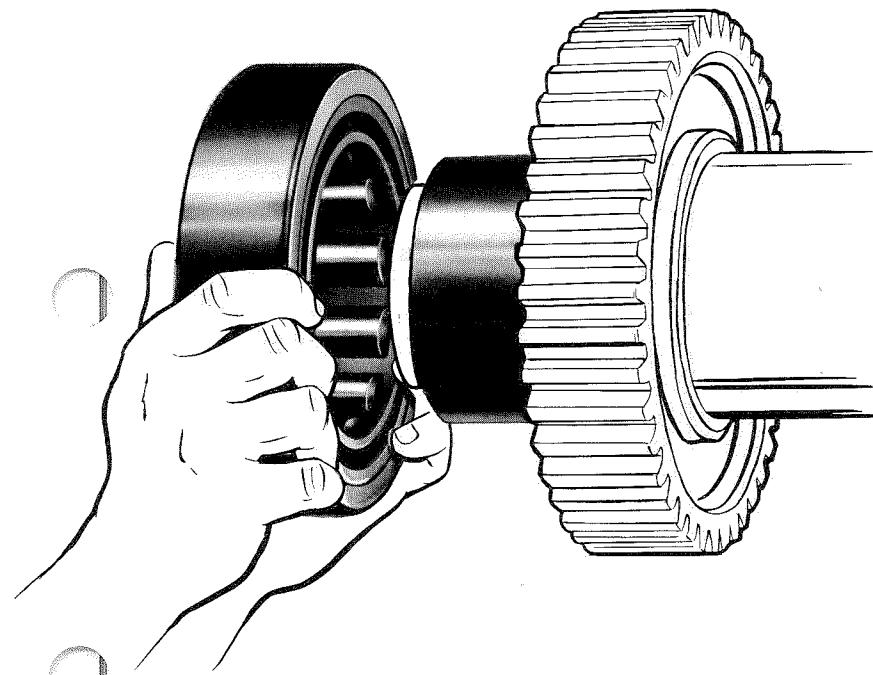

BEARING LIFE RATING

Any bearing subjected to continuous operation will eventually fail. No bearing has unlimited life. Under proper operating conditions, however, all causes for failure can be eliminated except fatigue which occurs as the result of repeated stresses of the bearing surfaces. Other manifestations are classified as bearing damage. They result from lack of lubrication, contamination, misalignment, false brinelling, failure of lubricant or factors other than the bearing itself.

Bearing life is measured in the number of revolutions or hours of operation, at a given speed and imposed load, required to induce fatigue. Bearings which are apparently identical and operate under identical conditions will not have identical lives. The usual basis for life is the one which 90% of the bearings may be expected to exceed. This is referred to as B-10 and it is the basis used in this catalog.

The average life of bearings listed here will be five times the B-10 life.

METRIC HY-ROLL BEARINGS FITTING PRACTICE

There are some general rules applicable to all bearing types.

The most important rule is that the rotating member should be a press fit. NDH Bearings are designed to allow for the reduction of internal clearance due to the expansion or contraction of one press fitted member. This permits heavy press fits, but press fitting of both members will result in excessive loss of internal clearance. The one exception to this rule is in the NDH Metric Hy-Roll "K-Line" Series Bearings which are specifically designed for press fits on both inner and outer rings. (See page 96)

NDH inner rings are made of carburized steel and may be pressed on a shaft with a heavy fit without danger of cracking. A press fit is the best means of holding a ring on a shaft, since it eliminates clamping or locking devices. The press fits given in this catalog are satisfactory for catalog load ratings. Where loads are very high, special fit recommendations or special bearing clearance may be required.

The shaft press fits given in this catalog are for solid steel shafts. For hollow shafts or for other materials, an equivalent fit can be calculated. Additional information may be obtained from the nearest NDH Sales Office.

The resultant clearance left when one ring is a press fit is usually satisfactory to handle some differential thermal expansion between the rings. However, when this differential is high, special clearance may be required. Such cases commonly arise when a hollow shaft is used as a transfer medium for steam, or when the housing is cooled by a fan or water. In general, differential expansion conditions should be checked when some unusual external cooling or heating condition exists on either ring or when the bearing is subject to some heating condition causing an operating temperature over 250°F.

Shaft and housing limits are given in the appropriate tables. Whenever possible, shafts and housings should be provided with a shoulder against which the press fitted ring seats. This shoulder must be square with the diameter, since an out-of-square condition may reflect in the ring diameter. This is especially true with narrow rings. Shoulder diameter recommendations given in this catalog represent a minimum height of shoulder for proper seating.

The Metric Hy-Roll Series Bearings have other mounting options, such as blind dowel holes and ring grooves in the outer rings for location.

NDH Metric Hy-Roll Series Bearings require no special means for axial retention of the roller assembly. However, the construction of the other series requires that the shaft or housing (usually the latter) have two smooth surfaces on either side of the bearing ring to retain the roller assembly.

When the retaining surfaces project inward from the outer ring or housing bore, the retainment is said to be of the "housing or outer ring type". When the retaining surfaces project outward from the shaft, the retainment is said to be of the "shaft or inner ring type". The housing type retainment is simpler and more economical, but the design of adjacent parts usually determines which type should be adopted.

Care should be exercised to avoid diagonal or cross retainment—that is, using the housing type on one side and shaft type on the other—because any considerable movement of the shaft, axially, will pinch the roller assembly and result in improper bearing operation.

METRIC HY-ROLL BEARINGS FITTING PRACTICE

TYPES OF FITS

Metric Hy-Roll Bearing rings may be fitted to the shaft or housing with various degrees of tightness or looseness between the mating parts. The appropriate fit is determined by the conditions of operation or assembly. The commonly known types of fit are press, tap and push fits. The limits for the shaft diameter and housing bore along with the resulting fits for each condition are shown on pages 98 through 107.

PRESS FITS

Metric Hy-Roll rings may be retained by press fits without the use of snap rings, lock nuts or keys. This permits more economical, simpler design and construction. It also eliminates the eccentricity which often results from endwise clamping of rings. For example, referring to the table on page 98, we find that the inner ring of a 1009 or 1309 bearing may be press fitted on a shaft with the resulting fits ranging from .0004 tight to .0015 tight. This fit is sufficient to hold the ring in position under normal conditions of operation. The shaft diameter limits producing this fit are shown in the adjacent columns as 1.7727-1.7721.

In general, the *rotating* ring of an application should be mounted with a press fit. The stationary ring is mounted with a looser fit. Positive retention is essential for the rotating rings since any looseness between the ring and the shaft, or housing, induces slippage and rapid wear at the contacting surfaces. For the Metric Hy-Roll Bearing, the internal clearance built into the bearing will not accommodate a press fit on both the inner and outer rings.

Refer to section on "K-Line" Bearings on page 103 for applications where both rings must be mounted with press fits.

The gripping force of a ring pressed on a hollow shaft is a function of the shaft wall thickness and, for a comparable fit, is less than that of a ring pressed on a solid shaft. Consult your NDH Sales Representative for recommended shaft diameter limits for hollow shafts.

TAP FITS

Since a rotating ring requires a tight or press fit, a looser fit is used in mounting the stationary ring. Such fits are known as tap fits and are shown for non-rotating inner rings in the table on page 99 and for non-rotating outer rings on page 101.

For example, on an application of bearing A-1209-TS with a revolving shaft, the inner ring is pressed on the shaft. The outer ring is applied in a housing bore 3.3470-3.3460 with resulting fits. .0005 tight to .0011 loose.

PUSH FITS

Push fits must be used in applying the outer rings of non-separable Metric Hy-Roll Bearings, i.e. U-TS, U-YS, U-TM and U-YM configurations. Because these bearings are assembled as complete units, the outer ring fit is looser; this enables the outer ring to align itself more readily with the inner ring during assembly.

For example, bearing U-5206-TS, with a rotating shaft, would be applied in housing bore 2.4421-2.4409 with resulting fits of .0000 to .0017 loose. See table, page 100.

"K" LINE BEARINGS

TABLES ON PAGES 98 and 103

"K" Line Bearings are applied with a press fit on both the inner and outer rings. The shaft diameter limits and resulting fits are shown under the "Press Fit" columns in the table on page 98. The housing bore limits and resulting fits are shown on page 103.

The "K" Line Bearings are essentially the same as the standard Metric Hy-Roll Bearings with two main differences as follows:

1. The bearing O.D. is larger than standard, as tabulated on page 103.
2. Extra internal clearance is added to the bearing to accommodate the contraction of the outer ring as well as the expansion of the inner ring due to the press fit.

It should be noted that the housing bore limits shown in the table on page 103 are identical with the "Tap Fit" housing bore limits in the table on page 101.

"K" Line Bearings are identified by a "K" following the outer ring symbol. Example: 1206TKS.

BEARINGS WITH INNER RING OMITTED

TABLES ON PAGES 104 and 105

The separable inner ring types of Metric Hy-Roll Bearings may be applied with the rollers operating directly on the shaft. In this way, it is

METRIC HY-ROLL BEARINGS FITTING PRACTICE

possible to utilize a shaft of larger diameter or a bearing of smaller size, thereby gaining greater shaft rigidity or a saving on bearing cost.

For best operational results, the shaft surface must be suitably hardened and finished. When the shaft is carburized, the case depth must be adequate to carry the load. Consult your NDH Sales Representative for specific data.

To realize the full rated capacity of the bearing, the shaft hardness must be Rockwell C60 to C64. Where this hardness cannot be obtained, the bearing rating must be modified by a hardness factor taken from the chart to the right.

When the outer ring is mounted with a standard press fit, shaft diameter limits as shown in the table on page 105 should be used.

When the outer ring is applied in a housing with standard tap fit limits, the shaft diameter limits shown in the table on page 104 apply.

Consult your NDH Sales Representative for shaft diameter limits for 6200 series bearings applied without inner rings.

BEARINGS WITH OUTER RING OMITTED

TABLES ON PAGES 106 and 107

The separable outer ring types of Metric Hy-Roll Bearings may be applied with the rollers operating directly on a hardened and ground alloy steel bore. In this way, it is possible to utilize a smaller housing bore, or a larger bearing and a larger shaft to increase the shaft rigidity where this may be necessary.

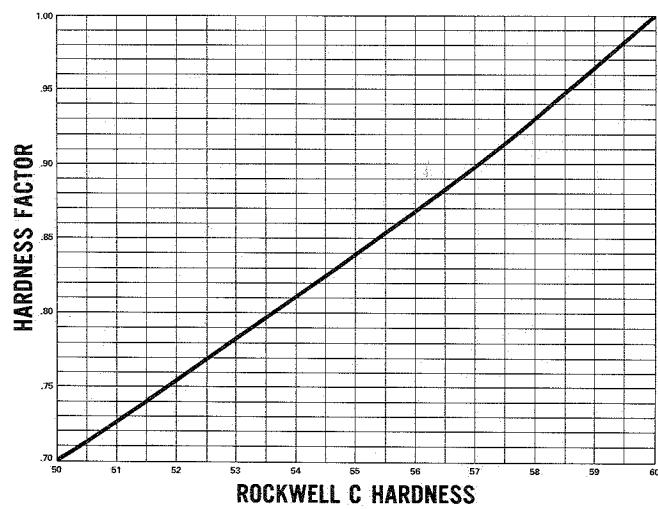

For best operational results, the bore must have suitable surface hardness and quality of finish and adequate case depth when carburized.

To realize the full rated bearing capacity, the bore hardness must be Rockwell C60 to C64. For lower hardnesses, modify the bearing rating with factors shown at the right.

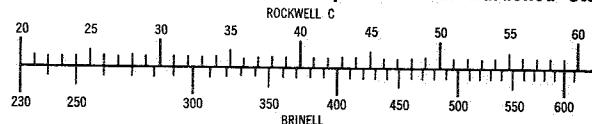

The bore diameter limits shown in the table on page 107 apply when the outer ring is omitted and the inner ring is a press fit on the shaft. When the outer ring is omitted and the inner ring is a tap fit, use housing bore diameter shown in the tables on page 106.

HARDNESS FACTOR

When NDH Metric Hy-Roll Bearings are used with either ring omitted, and if operation at rated capacity is desired, the surface upon which the rollers operate must have a hardness of Rockwell C60 to C64. If this hardness cannot be obtained, the bearing rating must be modified by a factor selected from the chart shown below.

Brinell* and Rockwell** Hardness Equivalents for Hardened Steels

*Hultgren 10 mm Ball Penetrator, 3000 Kg Load.

**Brale Penetrator, 150 Kg Load.

| 64 | 320 | 12.5984 | 12.5968 | 12.6023 | 12.6009 | .0025 | .0055 | |

When an inner ring is press fitted, the outer ring should be a tap fit for all bearing configurations except non-separable bearings (i.e., U-TS, U-TM, U-YS and U-YM). See page 101 for tap fit dimensions.

Non-separable bearings in which the inner ring is press fitted . . . the outer ring must be a push fit. See table on page 100 for push fit dimensions.

▲ Minimum bore same as AFBMA Fit Class J7. Maximum bore within AFBMA Fit Class J7 Tolerance.

When an outer ring is mounted in the housing with a tap fit, the accompanying inner ring is mounted on the shaft with a press fit. See page 98 for press fit dimensions.

▲ Minimum bore same as AFBMA Fit Class N7. Maximum bore within AFBMA Fit Class N7 Tolerance.

When an outer ring is press fitted into the housing, the accompanying inner ring should be a tap fit. See table on page 99 for dimensions.

△ Consult NDH Engineering Department for size.

The above shaft diameter limits also apply to "K" line bearings using heavy press fit outer ring. See page 103 for dimensions.

For 6200 series bearing shaft diameters, consult the NDH Engineering Department.

Suffix symbol "G" is used with bearing number to indicate outer ring with standard O.D. groove. Example 1207TGS, 1207ZG.

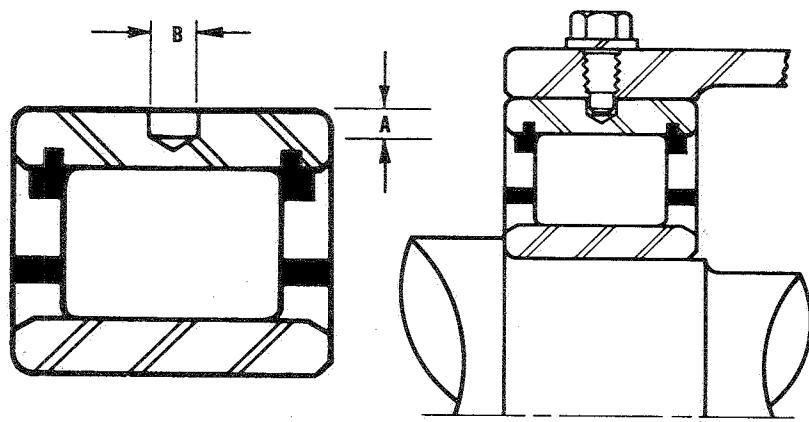

On non-symmetrical rings, types L and Y, Standard Location is at the thin end of the ring:

METRIC HY-ROLL BEARINGS FITTING PRACTICE

BEARINGS WITH OUTER RING O. D. DOWEL HOLES

Bearings may be located in a housing with a dowel through a housing hole registering with a blind hole in the outer ring. A dowel, so applied, prevents both lateral and rotational movement of the outer ring. This is also an added safety measure in cases of press fitted rings. The hole dimensions, opposite the bearing sizes to which they apply, are tabulated below. Consult your NDH Sales Representative for available sizes.

TYPICAL APPLICATION

S E R I E S

| 1000 | 1200 5300 | 1300 5300 7300 | 1900 |

| 022 thru 028 | 216 and 217 | 310 thru 313 | 930 thru 938 |
| 030 thru 064 | 218 thru 228 | 314 thru 321 | 940 thru 964 |
| — — — | 230 thru 264 | 322 thru 340 | — — — |

DOWEL HOLE DIMENSIONS

| A DEPTH | B SIZE |
|---------------|-----------|
| No Dowel Hole | |
| .040-.060 | 9/32 |
| .060-.080 | 9/32 |
| .090-.100 | 5/16 |
| .120-.140 | 3/8 |
| .160-.180 | 7/16 |
| .180-.210 | 1/2 |

HOLE DIA. TOLERANCE +.010 -.000

Hole size to apply to all widths in their respective series.

Blind hole centrally located in the width of the outer ring.

Suffix symbol "F" is used with bearing number to indicate outer ring with a blind hole. Example: 1207TFS, 1207ZF.

The shaft diameter limits given in these tables will result in a press fit between inner ring and shaft. Notched inner rings

may be applied with a slip or loose fit and retained with a key, where this may be desirable.
