STRUCTURE AND ADVANTAGES

NB's slide guide SEBS3A type consists of a block and a guide rail, both of which have two precision ground raceway grooves. The block consists of a main body, balls, and return caps.

Compact Design

The two raceway and four-point contact structure of the SEBS3A type minimize its height and give further advantage installation with limited space and reduces overall weight.

High Moment Loads

With the wide block (WA type), long block (AY type), and wide and long block combination(WAY type) are available and the versatile selection of blocks will realize an increase of moment capacity in your application.

Anti-Corrosion Type

The SEBS3A type slide guide uses Martensite stainless steel that is highly resistant to corrosion and

may be used in hostile environments.

Smooth Motion

Based on NB's manufacturing technology expertise for slide guide product, smooth linear motion movement is maintained evenly with the compact sized SEBS3A.

ACCURACY

The SEBS 3A type slide guide is available in two grades of accuracy: high-grade (no symbol) and precision-grade (P).

MOUNTING BOLTS

Mounting bolts for SEBS3A are available from NB. M2 custom type bolts come with SEBS3WA and SEBS3WAY(mounting holes on the rail are counter-bore type).

INSTALLATION

Shapes of mounting planes

Slide Guides are generally mounted by pushing the reference surface of the rail and block against the shoulder of the mounting surface.

An escape groove should be provided at the corner of the shoulder in order to avoid interference with the corner of the rail or block.

Recommended tightening torque

The bolts used to secure the rail should be tightened using a torque wrench. The recommended torque values are given in Table5.
