

## Designations

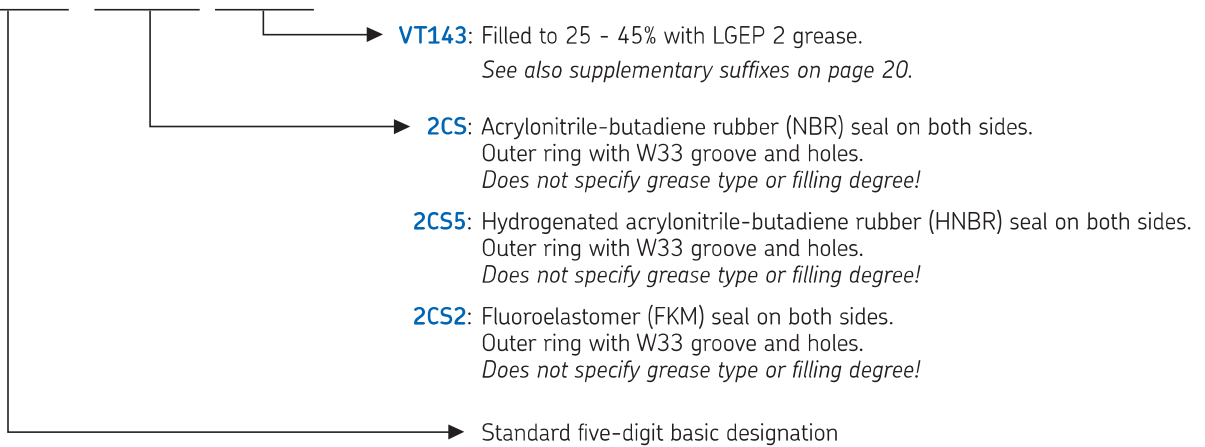

There are two designation systems for SKF Explorer sealed spherical roller bearings. One identifies sealed bearings in the standard ISO dimension series and the other extended width versions.

Below is shown how the two designation systems are to be interpreted. Other suffixes, denoting special bearings or frequent variants, e.g. radial internal clearance other than Normal, are added according to the standard designation system.

### Bearings with dimensions according to ISO standard

**xxxxx-2CSx/xxxx**

Example: 24026-2CS5/VT143

### Bearings with extended width

**BS2-xxxx-xCSx/xxxx**

Example: BS2-2222-2CS5/VT143
