# **Replacing Cups and Cones Together**

Timken recommends replacing the bearing cone (inner race) and bearing cup (outer race) at the same time and that both components come from the same manufacturer.

## Avoid Mixing Parts from Different Bearing Manufacturers

#### Common Problems Caused By Mixing Parts

- Incompatible internal bearing profile
- Overall bearing width difference due to tolerance differences
- Bearing rating differences
- Surface finish variations due to different manufacturing processes and technology
- Steel quality and cleanness variations
- Steel processing and steel type variations
- Variances in worldwide bearing manufacturing quality

Timken has 56 sets of MileMate® matched wheel bearing sets available for the commercial vehicle industry. (See chart on front and back page for the Timken part number and corresponding set number.)

## Choose MileMate Sets Instead of Individual Inner and Outer Races

A MileMate set is a Timken matched outer race and inner race in a convenient single box.

**Convenience:** The bearing components are together in one box – meaning less inventory.

Longer Bearing Life: Timken<sup>®</sup> bearings have contoured profiles on the contact surfaces, which evenly distribute the load helping to optimize performance and life.

#### Matched Outer and Inner

**Races:** International standards only mandate that the same part numbers have the same basic outside diameter, bore, width and outer race angle. This means that internal geometries and characteristics could vary from manufacturer to manufacturer.

### Lower Maintenance Costs: The cost of matched parts is relatively small compared to the

cost of unscheduled downtime.

Timken Set Number	Timken Part Number	Common Application Description		
Manually Adjusted Wheel Ends				
SET401	580, 572	Industry Standard R Drive Axle - Outer Bearing		
SET402	582, 572	Potential R Drive Axle - Outer Bearing (Mack Special Radius)

#### WARNING Failure to observe the following warnings could create a risk of death or serious injury.

Never spin a bearing with compressed air. The components may be forcefully expelled. Proper maintenance and handling practices are critical. Always follow installation instructions and maintain proper lubrication. A bearing/component should not be put into service if its shelf life has been exceeded.

#### CAUTION Failure to follow these cautions may result in property damage

Use of improper bearing fits may cause damage to equipment. Do not use damaged bearings.

TechTips is not intended to substitute for the specific recommendations of your equipment suppliers. Every reasonable effort has been made to ensure the accuracy of the information contained in this writing, but no liability is accepted for errors, omissions or for any other reason.

The Timken team applies their know-how to improve the reliability and performance of machinery in diverse markets worldwide. The company designs, makes and markets high-performance mechanical components, including bearings, gears, belts, chain and related mechanical power transmission products and services.
